

THE HEALTH OF HUMANS, ANIMALS, AND ECOSYSTEMS ARE INTERCONNECTED

ONE HEALTH

IN CONTEXT

KEY FIGURE

Calvin Schwabe (1927–2006)

BEFORE

1858 German physician Rudolf Virchow argues that veterinary and human medicine should not be separate disciplines.

1964 In *Veterinary Medicine and Human Health*, Calvin Schwabe seeks to encourage collaboration between human and veterinary medicine.

1984 Schwabe adopts the term “One Medicine” to describe his ambition to bring together the study of animal and human health.

AFTER

2008 In a paper for *Nature*, British ecologist Kate Jones links high human population density to the emergence of zoonotic diseases.

2012 The first One Health Summit takes place in Davos, Switzerland.

The devastating Covid-19 pandemic, which between 2019 and 2022 caused 609 million infections and killed 6.5 million people, shined a spotlight on zoonotic diseases. SARS-CoV-2—the cause of Covid-19—is a type of coronavirus, which is a zoonotic disease. This term is used to define
