ORDERING THE NATURAL WORLD

In all things of nature there is something of the marvellous • Classification of living things

By the help of microscopes nothing escapes our inquiry • The microbiological environment

If you do not know the names of things, the knowledge of them is lost • A system for identifying all nature's organisms

"Reproductively isolated" are the key words • Biological species concept

Organisms clearly cluster into several primary kingdoms • A modern view of diversity

Save the biosphere and you may save the world • Human activity and biodiversity

We are in the opening phase of a mass extinction • Biodiversity hotspots

THE VARIETY OF LIFE

It is the microbes that will have the last word • Microbiology

Certain tree species have a symbiosis with fungi • The ubiquity of mycorrhizae

Food is the burning question • Animal ecology

Birds lay the number of eggs that produce the optimum number of offspring • Clutch control

The bond with a true dog is as lasting as the ties of this earth can ever be • Animal behaviour

Redefine "tool", redefine "man", or accept chimpanzees as humans • Using animal models to understand human behaviour

All bodily activity depends on temperature • Thermoregulation in insects

ECOSYSTEMS

Every distinct part of nature's works is necessary for the support of the rest • The food chain

All organisms are potential sources of food for other organisms • The ecosystem
