“Man is part of nature and his war against nature is inevitably a war against himself.”

Rachel Carson

New policies

Notable scientists supported Carson’s findings and US President John F. Kennedy invited her to testify before a Congressional Committee in 1963. She called for new policies that would serve to protect the environment. The Committee released a report entitled “The Uses of Pesticides,” which broadly supported Carson’s book. Inspired by Carson, activists continued to lobby government until in 1972, a decade after *Silent Spring* was first published, DDT was banned in the US. Other countries followed, although some retain it to control mosquitoes.

The legacy of *Silent Spring* is greater than the banning of DDT. It demonstrated to industry giants and government the power of an educated public.
