A population of populations • Metapopulations

Organisms change and construct the world in which they lives • Niche construction

Local communities that exchange colonists • Metacommunities

THE LIVING EARTH

The glacier was God's great plough • Ancient ice ages

There is nothing on the map to mark the boundary line • Biogeography

Global warming isn't a prediction. It is happening • Global warming

Living matter is the most powerful geological force • The biosphere

The system of nature • Biomes

We take nature's services for granted because we don't pay for them • A holistic view of Earth

The health of humans, animals, and ecosystems are interconnected • One Health

Plate tectonics is not all havoc and destruction • Moving continents and evolution

Life changes Earth to its own purposes • The Gaia hypothesis

65 million years ago something killed half of all the life on the Earth • Mass extinctions

Burning all fuel reserves will initiate the runaway greenhouse • Environmental feedback loops

THE HUMAN FACTOR

Environmental pollution is an incurable disease • Pollution

God cannot save these trees from fools • Endangered habitats

We are seeing the beginnings of a rapidly changing planet • The Keeling Curve

The chemical barrage has been hurled against the fabric of life • The legacy of pesticides

A long journey from discovery to political action • Acid rain

A finite world can support only a finite population • Overpopulation
