

PRESERVING BIODIVERSITY IS KEY TO OUR SURVIVAL

HALTING BIODIVERSITY LOSS

IN CONTEXT

KEY FIGURE

Partha Dasgupta (1942–)

BEFORE

2012 The world's governments establish the Intergovernmental Science-Policy Platform on Biodiversity and Ecosystem Services (IPBES) to monitor the state of global biodiversity and ecosystems.

2016 In *Half-Earth*, American ecologist Edward O. Wilson proposes that Earth can be saved by dedicating half of it to nature.

2018 The IUCN Red List shows that more than 26,000 species—27 percent of those assessed—are known to be at risk of extinction.

AFTER

2022 The Kunming-Montreal Global Biodiversity Framework agrees on a plan for human society to be living "in harmony with nature" by 2050.

The abundance and variety of Earth's plants and animals, and the extent and quality of its ecosystems (its biodiversity) are under threat. Some scientists suggest that we are in a sixth mass extinction. This is, in part, due to a conflict between preserving or restoring land needed by threatened animals and plants, and feeding the planet's growing human population, since more
