“rebalancing our demand of nature’s goods and services with its capacity to supply them.”

Dasgupta’s recommendations, which relate to the UK but could be applied globally, include the expansion and better management of areas protected for nature; policies that discourage damaging forms of consumption; the adoption of different metrics for economic success, with natural capital being included in the Treasury’s accounting; and transforming the education and finance systems to allow and sustain these changes.

Nature restoration is a key strategy for halting biodiversity loss. This replanting project, in Sumatra, Indonesia, aims to restore natural habitat for the Sumatran orangutan.
