DAVID ATTENBOROUGH

1926–

British naturalist and television producer Attenborough served as a controller for the BBC before stepping down to dedicate more time to writing and producing documentaries. He wrote and narrated a series of nature programs, notably the *Life* series, beginning with *Life on Earth* (1979). Attenborough's work has been credited with renewing public interest in nature and conservation in Great Britain.

PETER H. KLOPFER

1930–

Berlin-born Klopfer is an ecologist whose main area of interest is ethology, studying animal behavior in a natural environment. His influential 1967 book *An Introduction to Animal Behavior: Ethology's First Century* acted as a survey and synthesis of past and present ethological theories. In 1968, he began teaching in the Department of Zoology at Duke University, North Carolina, where he was instrumental in starting its primate center.

DIAN FOSSEY

1932–1985

Most of what is known about the lives and social structures of wild mountain gorillas in Africa derives from the work of primatologist and conservationist Fossey. The daughter of a San Francisco fashion model, she graduated and worked as an occupational therapist before visiting Africa, where she met, and was inspired by, Mary and Louis Leakey. In early 1967 Fossey founded the Karisoke Research Center in the Rwandan mountains,
