JAMES A. YORKE

1941–

An American mathematician and physicist based at the University of Maryland, Yorke is best known for his work on chaos theory. In his 1975 paper "Period Three Implies Chaos," written with Chinese mathematician Tien-Yien Li, he argued that above a certain rate of growth, population forecasts become totally unpredictable, a discovery with major ecological implications.

IAN LOWE

1942–

Lowe, an Australian environmentalist who studied engineering and science at the University of New South Wales and earned his Ph.D. in physics at the University of York, advises the UN's Intergovernmental Panel on Climate Change. He is outspoken on the need for renewable energy, arguing that it is "quicker, less expensive, and less dangerous than nuclear power." In 1996, Lowe chaired the expert group responsible for the first report on the state of Australia's environment. Lowe is now Emeritus Professor of Science, Technology, and Society at Griffith University, Brisbane.
