QUOTE ATTRIBUTIONS

THE STORY OF EVOLUTION

Early theories of evolution Jean-Baptiste Lamarck
Extinction and change Georges Cuvier
Uniformitarianism James Hutton
Evolution by natural selection Charles Darwin
The rules of heredity Haruki Murakami
The role of DNA Francis Crick

ECOLOGICAL PROCESSES

Predator–prey equations Vito Volterra
Ecological niches Joseph Grinnell
Competitive exclusion principle Georgy Gause
Field experiments Joseph Connell
Mutualisms Daniel Janzen
Keystone species Kevin D. Lafferty and Thomas Suchanek
Optimal foraging theory Eric Charnov, H. Ronald Pulliam, and Graham Pyke
Non-consumptive effects of predators on their prey Liana Zanette

ORDERING THE NATURAL WORLD

Classification of living things Aristotle
The microbiological environment Robert Hooke
A system for identifying all nature's organisms Carl Linnaeus
Biological species concept Ernst Mayr
A modern view of diversity George Fox and Carl Woese
Human activity and biodiversity Edward O. Wilson
