

Diagram illustrates the distribution of the world's water.

All water: 97.5 per cent is in oceans and 2.5 per cent is fresh water.

Fresh water: 79 per cent is in ice caps and glaciers, 20 per cent in groundwater, and 1 per cent in easily accessible surface water.

Easily accessible surface water: 52 per cent is in lakes, 38 per cent in soil moisture, 8 per cent in atmospheric water vapour, and 1 per cent in rivers and water within living organisms.
