Ans. (d) : 1. A is between D & F

2. C is opposite to D

3. D & E are not neighbors

By seeing this career we can say that B and E are neighbors.

126. Match List-I with List-II and select the correct answer using the codes given below the lists

List I (Artist)	List II (Medium of music delivery)
A. Balamurali Krishna	1. Hindustani vocal
B. MitaPandit	2. Ghatam
C. Kanyakumari	3. Sitar
D. Nikhil Bannerjee	4. Carnatic vocal
	5. Violin

	A	B	C	D
(a)	5	1	2	3
(b)	4	3	1	5
(c)	3	1	5	2
(d)	5	4	1	3

Ans. (a) : Balamurali Krishna is famous carnatic vocalist, Mita Pandit is famous Hindustani vocalist, Kanyakumari is famous for Ghatam from of singing and Nikhil Banerjee is famous sitar player.

127. In a class there are 18 boys who are over 160 cm tall. If these boys constitute three-fourths of the boys and the total number of boys is two-third of the number of students in the class, then what is the number of girls in the class?

(a) 6 (b) 12
(c) 18 (d) 24

Ans. (b) : Let the number of boys be x. Then, (3/4) x = 18 or x = 18 x(4/3) = 24.
If total number of students is y, then (2/3) y = 24 or y = 24 x (3/2) = 36.
Therefore Number of girls in the class = (36 - 24) = 12.

128. A college student desires to get elected to the Municipal Council of his city. The validity of his nomination would dependent on the important condition, among others, that:

(a) He obtains permission from the Principal of his college
(b) He is a member of a political party
(c) His name figures in the Voter's List
(d) He files a declaration owing allegiance to the Constitution of India

Ans. (c) : A person needs to be 21 years of age for contesting in municipal elections. Unless one's name is not in the voters' list, he is not eligible to contest Municipal Council in his city.

129. Which one of the following statements is incorrect?

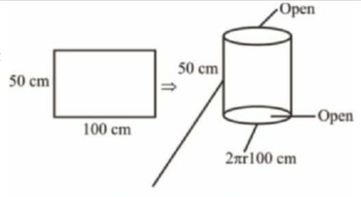

(a) Goa attained full statehood in 1987
(b) Diu is an island in Gulf of Khambhat
(c) Daman and Diu were separated from Goa by the 56th Amendment of the Constitution of India
(d) Dadra and Nagar Haveli were under French colonial rule till 1954

Ans. (d) : The Annexation of Dadra and Nagar Haveli, also known as the Invasion of Dadra and Nagar Haveli, was the conflict in which the territories of Dadra and Nagar Haveli passed from Portuguese rule to Indian Union rule in 1954. The territories were subsequently merged into the Indian Union in 1961.

130. A rectangular piece of iron sheet measuring 50 cm by 100 cm is rolled into a cylinder of height 50 cm. If the cost of painting the cylinder is Rs. 50/- per square meter, then what will be the cost of painting the outer surface of the cylinder?

(a) Rs. 25.00 (b) Rs. 37.50
(c) Rs. 75.00 (d) Rs. 87.50

Ans. (a) :

Curved Surface Area of Cylinder = 2πrh

Here we take only curved surface area, not total surface area because the upper and bottom surface are opened which we can't paint it).
Earned surface area = 2πrh
$= 100 \times 50$ $\{\because 2\pi r = 100\,cm,\ h = 50\,cm\}$
$= 5000\ cm^2$
$= \frac{5000}{100\times100} = .50m^2$ {By converting cm^2 into m^2}
Cost of painting = 50/per meter
∴ total cost of painting = 0.5 × 50 = 25 Rs.

131. Which one of the following statements is not true?

(a) Ghaggar's water is utilised in the Indira Gandhi Canal
(b) Narmada rises from Amarkantak region
(c) Nizam Sagar is situated on the Manjira river
(d) Penganga is a tributary of the Godavari

Ans. (a) : Indira Gandhi canal originated from Harike barrage at Sultanpur on Sutlej but Ghaggar is a tributary of river Saraswati, which ends in the Thar desert.

132. In an examination, every candidate took physics or mathematics or both 65.8% took physics and 59.2% took mathematics. The total number of candidates was 2000. How many candidates took both physics and mathematics?

(a) 750 (b) 500
(c) 250 (d) 125

Ans. (b) : Let x% candidates take both the subjects.
Percentage of candidates who opted Physics = 65.8% and percentage of candidates who opted Mathematics = 59.2%
∴ x = (65.8 + 59.2 - 100)% = (125 - 100)% = 25%
Also, total number of candidates = 2000
∴ Number of candidates who opted both the subjects = 25 x 2000/100 = 500

133. The memory of a computer is commonly expressed in terms of kilobytes or Megabytes. A byte is made up of:

(a) eight binary digits (b) eight decimal digits
(c) two binary digits (d) two decimal digits

Ans. (a) : The byte is a unit of digital information in computing which consists of eight bits.

134. A bag contains 20 balls. 8 balls are green, 7 are white and 5 are red. What is the minimum number of balls that must be picked up from the bag blind-folded (without replacing any of it) to be assured of picking atleast one ball of each colour?

(a) 4 (b) 7
(c) 11 (d) 16

Ans. (d) : A bag contains 20 balls, 8 balls are Green, Fairy White and 5 are Red. We have to pick at least one ball of each colour.
Now considering this–

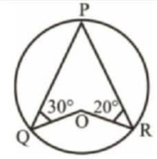

- Even if we pick 8 balls, there is probability that all of them may be green. Hence we must pick more than 8 balls for sure.
- Now, if we pick 8 + 7 balls, that is 15 balls, there is a probability that all of them may be green and white only with no red ball picked at all.
- Hence, taking a worst possible condition we must pick = 15 + 1 = 16 balls to be sure that at least one ball of all the three colour is picked.

135. Which one of the following has a greater perimeter than the rest?

(a) A square with an area of 36 sq. cm.
(b) An equilateral triangle with a side of 9 cm.
(c) A rectangle with 10 cm. as length and 40 sq. cm. as area
(d) A circle with a radius of 4 cm.

Ans. (c) : Side of the square $\sqrt{36}$ = 6cm Perimeter of the square = 4(6) = 24 cm (b) Perimeter of the triangle = 9 + 9 + 9 = 27 cm (c) Area of the rectangle = 40 lb = 40 b = 40/10 = 4 Perimeter = 2(l + b) = 2(4 + 10) = 28 cm (d) Perimeter of the circle = 2πr = 2(3.14)(4) = 25.12 cm Clearly, Perimeter of the rectangle is maximum.

136.

In the given figure angle OQP=30°, and angle ORP = 20°, angle QOR is equal to:

(a) 100° (b) 120°
(c) 130° (d) 140°

Ans. (a) : In ΔPOQ
Side OQ = OP = radius
Then ∠PQO = ∠OPQ = 30
In ΔPOR
OR = OP = Radius
∴ ∠ORP = ∠RPO = 20°
∴ ∠QPR = ∠QPO + ∠RPO = 30 + 20 = 80
∵ Angle at the centre = 2 × (Angle of the perimeter)
∠QOR = 2×50 = 100°

137. A club has 108 members. Two-thirds of them are men and the rest are women. All members are married except for 9 women members. How many married women are there in the club?

(a) 20 (b) 24
(c) 27 (d) 30
