Ans. (a) 'A' marked city in map is Darwin in Australia.
'B' marked city in the given map is Kualalumpur in Malayasia.
'C' marked city in map is Nairobi in Kenya.
The city marked 'D' in the map is Lagos in Nigeria.

53. A person of mixed European and Indian blood in Latin America is called a:

(a) Mulatto (b) Mestizo
(c) Meiji (d) Mau-Mau

Ans. (b) : A person of mixed European and Indian blood in Latin America is called a Mestizo. The term mestizo means mixed in Spanish, and is generally used throughout Latin America to describe people of mixed ancestry with a white European and an indigenous people.

54 The physical regions marked as 1, 2, 3 and 4 on the given map are respectively:

(a) Andes, Brazilian Shield, Guyana Highlands and Amazon Basin
(b) Andes, Guyana Highlands, Brazilian Shield and Amazon Basin
(c) Amazon Basin, Guyana Highlands, Brazilian shield and Andes
(d) Guyana Highlands, Brazilian Shield Andes and Amazon Basin

Ans. (a) : In the given figure: Andes is marked as '1', which is located at the western coast of South America. Brazilian shield is marked as '2'; this area is located at the eastern part of South America. The shield extends over 8.5 million square area. Guyana highland is marked as '3'; Guyana highland is a plateau and low mountain region of South America located north of Amazon river and South of Orinoco river. Amazon basin is marked as '4'; it is the largest tropical rain forest in the world. Amazon River drains more than half of Brazil, part of Bolivia, Peru and Ecuador.

55. Consider the following statements about the European Union:

1. The European Union was known earlier as the European Community.
2. The Single European Act (1986) and the Maastricht Treaty were milestones in its formation.
3. Citizens of European Union countries enjoy dual citizenship.
4. Switzerland is a member of the European Union

Which of the above statements are correct?

(a) 2 and 4 (b) 1 and 3
(c) 3 and 4 (d) 1, 2 and 3

Ans. (d) : Switzerland is not a member of the European Union. Apart from statement 4, all the other three statements are true.
In 1986, the Single European Act is signed. This was a treaty which provided the basis for a vast six-year program aimed at sorting out the problems with the free flow of trade across Europian borders and thus creates the 'Single Market'. 'Maastricht' Treaty on European Union in 1993 and the Treaty of Amsterdam in 1999 were signed to protect environment. EU citizenship was established in 1991 by the Treaty on European Union in order to promote European values and identity. The Treaty confers on EU citizens a set of rights, such as the right of free movement, the right of diplomatic protection, the right to vote in and stand for elections to the European Parliament. Some of these rights can be exercised only when moving from one Member State to another. EU citizenship depends strictly on national citizenship, since EU citizens are only those who already hold the citizenship of an EU Member State. Member States reserve the right to regulate the acquisition and loss of national citizenship in ways that reflect their interests and identities. Currently, there are 27 member countries in European Union. Switzerland is not a member of EU. Hence statement 4 is not correct.

56. The language spoken by the largest number of people in the world is:

(a) Hindi (b) English
(c) Mandarin (d) Spanish

Ans. (c) : Ethnologue (2019, 22nd edition)

Rank	Language	Percentage of world pop. (March 2019)
1.	Mandarin Chinese	11.922%
2.	Spanish	5.994%
3.	English	4.922%
4.	Hindi (sanskritised Hindustani)	4.429%

57. Assertion (A) : Chile continues to be an important producer of copper in the world.
Reason (R) : Chile is endowed with the world's largest deposit of porphyry copper.

(a) Both A and R are True and R is the correct explanation of A
(b) Both A and R are True but R is not a correct explanation of A
(c) A is true but R is False
(d) A is false but R is True

Ans. (a) : Chile is an important producer of copper in the world and it is endowed with the world's largest deposit of porphyry copper.

58. A ship from the eastern extremity of the Aleutian Islands to Dutch harbour crosses 180° meridian at 23.30 hrs. On January 1, 1999. what time and date will be recorded by the captain of the ship in his diary after one-hour journey from the point of crossing of the meridian?

(a) January 1, 0030 hrs
(b) January 2, 0030 hrs
(c) January 3, 0030 hrs
(d) January 4, 0030 hrs

Ans. (b) : The eastern end of the Aleutian Islands is located west on the 180º of longitude (172º E. Longitude) while Dutch Harbor is located to the east of the 180º of longitude (166º 31' 55" W. longitude) of the ship's 180º longitude. On moving from west to east of the line, the date will decrease by 1 day i.e. on crossing 180º meridian on January 1, 1999 at 23 : 30, the day will become December 31,1998 according to the rules and after 1 hour (23 : 30 + 60 : 00 + 24 : 00 + 30) The captain of the ship will enter the day at 00.30 as January 1, 1999. However, in reality the International Date Line does not exactly follow 180ºof longitude and is sometimes referred to as 180º of longitude in order to keep the politically and economically relevant regions together. Accordingly, the entire Alaska Territory (Which includes both The Aleutian Islands and Dutch Harbor) is placed east of the International date Line. In this situation, the International date Line will not be crossed by ship at all and even after crossing 180º meridian, the day will remain the same (January 1, 1999) and an hours there after would be recorded by the ship's captain at January 2, 00: 30 hrs.

59. Which one of the following scholars suggests the earth's origin from gases and dust particles?

(a) James Jeans (b) H. Alfven
(c) F. Hoyle (d) O. Schmidt

Ans. (d) : O Schmidt suggests the earth's origin is from gases and dust particles. O. Schmidt in 1943 gave Inter-Stellar Dust Hypothesis for the origin of the earth and solar system.

60. Match List-I with List-II and select the correct answer using the codes given below the lists:

List-I (Volcanic Mountain)	List-II (Country)
A. Mt. Rainier	1. Italy
B. Etna	2. Mexico
C. Paricutin	3. Philippines
D. Taal	4. U.S.A.

Codes:

	A	B	C	D
(a)	4	2	1	3
(b)	4	1	2	3
(c)	2	1	4	3
(d)	4	3	2	1

Ans. (b) : Mount Rainier, also known as Tahoma or Tacoma, is a large active stratovolcano located 59 miles south-southeast of Seattle, USA in Mount Rainier National Park. Mount Etna, or Etna, is an active stratovolcano on the east coast of Sicily, Italy, in the Metropolitan City of Catania, between the cities of Messina and Catania. It lies above the convergent plate margin between the African Plate and the Eurasian Plate. Parícutin is a cinder cone volcano located in the Mexican state of Michoacán, near the city of Uruapan and about 322 kilometers west of Mexico City. The volcano surged suddenly from the cornfield of local farmer Dionisio Pulido in 1943, attracting both popular and scientific attention. Taal Volcano is a complex volcano located on the island of Luzon in the Philippines. It is the second most active volcano in the Philippines with 33 historical eruptions. All of these eruptions are concentrated on Volcano Island, an island near the middle of Taal Lake.

61. In the given map, which one of the following pairs of ocean currents is shown?
