is visible every 76th year. The orbits of comets are elliptical.

49. Consider the map given below:
The river shown on the map is–

(a) Irrawaddy (b) Mekong
(c) Chao Phraya (d) Salween

Ans. (d) : The Salween river is located in the eastern part of Myanmar. This river is situated at Shan plateau of Myanmar. Its basin covers 320,000 sq km. This river forms the border between Burma and Thailand.

50. Match List-I with List-II and select the correct answer:

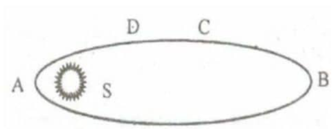

List-I (Crops)	List-II (Geographical conditions)
A. Barley	1. Hot and dry climate with poor soil
B. Rice	2. Cool climate with poorer soil
C. Millets	3. Warm and Moist climate with high attitude
D. Tea	4. Hot and Moist climate with rich soil

Codes:

	A	B	C	D
(a)	2	4	1	3
(b)	3	4	1	2
(c)	3	2	4	3
(d)	3	2	4	1

Ans. (a) : Barley requires cool climate with poor soil quality. Barley can be grown in high latitude even beyond the Arctic circle. Whereas rice needs hot and moist climate with rich soil. Millets are grown in hot and dry climate with poor soil, whereas tea needs warm and moist climate with high altitude.

51. The planet mercury is revolving in an elliptical orbit around the sun as shown in the given figure. The kinetic energy of mercury is greatest at the point labeled.

(a) A (b) B
(c) C (d) D

Ans. (a) : Due to the force of gravity, all the planets revolve around the Sun in an anti-clockwise direction. According to Kepler's law, the planet's field current is fixed for a planet revolving around the Sun. When the planet is closest to the Sun, its speed in orbit (V) is maximum. In this case its kinetic energy (1/2mv) is maximum.

52. "From Aceh in the far north west to Torees Strait in the east is 5000 miles, almost as far as from London to Baghdad. The archipelago has 14,000 islands some mere equatorial rocks, others some of the largest in the world." This description best fits:

(a) West Indies (b) Japan
(c) Philippines (d) Indonesia

Ans. (d) : The above statement is related to Indonesia. The country called Indonesia is a group of islands in which there are about 14000 islands. Some of these are large islands (Java, Sumatra) and some are only equatorial rock areas.

53. The group of small pieces of rock revolving round the sun between the orbits of Mars and Jupiter are called:

(a) meteors (b) comets
(c) meteorites (d) asteroids

Ans. (d) : Apart from the stars, planets and satellites, there are numerous tiny bodies which also move around the sun. These bodies are called asteroids. They are found between the orbits of Mars and Jupiter.

54. If the earth's direction of rotation is reversed, what would be the I.S.T. when it is noon at the International Date Line?

(a) 06.30 hrs. (b) 05.30 hrs.
(c) 18.30 hrs. (d) 17.30 hrs.

Ans. (c) : If the direction of rotation of the earth is reversed, then the relation of Indian Standard Time with the International Date Line will be inverted. That means the one which is +5.30 hrs now it will be -5.30 hrs.

55. Which one of the following stars is nearest to the Earth?

(a) Polaris (b) Alpha Centauri
(c) Sun (d) Sirius

Ans. (c) : The Sun is the closest star to the Earth, which is 109 times bigger than the Earth. The Sun is considered the father of the solar family. Who Provides light and heat to the solar system. The distance between the Sun and the Earth is about 152.09 million km. Earth is also a satellite among many satellites of the Sun. The

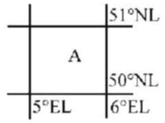

Sun is the basis of life on Earth. It takes 8 minutes 20 seconds for the light of the Sun to reach the Earth.

56. Which one of the following conditions is most relevant for the presence of life on Mars?

(a) Atmospheric composition
(b) Thermal conditions
(c) Occurrence of ice caps and frozen water
(d) Occurrence of ozone

Ans. (c) : Mars appears like a red ball. Due to the possibility of life, man has been more interested in this planet than other planets. The possibility of life on Mars has been proved by the presence of ice components and frozen water. This planet has a thin layer of atmosphere, in which nitrogen and argon gases are found.Nix Olympia is the highest mountain on Mars, which is three times higher than Mount Everest. At present, the exploration of this planet is going on by the European Union's Beagle-2 and NASA's Spirit mission.

57. Consider the geographical details given in the following figure:
The point marked by A in the above figure indicates a country in

(a) North America
(b) South America
(c) Europe
(d) Asia

Ans. (c) : In the geographical details given in the above figure, the point 'A' located between 50 ° north latitude to 51 ° north latitude and 5 ° east longitude to 6 ° east longitude, is showing the country located in the continent of Europe.

58. Consider the map given below:

Of the four shaded areas in the map, that which is characterised by hot dry summers, mild and moist winters and seasonal reversal of winds is the area labbeded:

(a) 1 (b) 2
(c) 3 (d) 4

Ans. (a) : Studying the climate of 1, 2, 3 and 4 shaded areas in the given maps, it is clear that only in the shaded part (1) there is hot, dry, summer and mild winter and seasonal reversal of winds. The shaded part 1 in the presented picture is indicating the California region of the United States of America. The other areas climatic conditions are different.

59. Which one of the following countries is the largest producer of fuel wood in the world?

(a) Indonesia (b) Russia
(c) India (d) China

Ans. (b) : Fuel wood refers to various forms of wood that are used as fuel for cooking heating or to drive stem powered engines or turbines for electricity generation.
As Russia is having largest percentage of forest cover and thus it is the largest producer of fuel wood in the world.

60. One will NOT have to pass through the Suez Canal while going from Bombay to:

(a) Alexandria (b) Suez
(c) Port Said (d) Benghazi

Ans. (b) : The Suez canal had been constructed in 1869 in Egypt between port said in the north and port Suez in the south linking the Mediterranean sea and the Red sea. So, while going from Bombay through Suez people will come across Alexandria port, port said and Benghazi port. Thus out of given options one will not pass through suez.

61. Which one of the following is present in the largest amount in terms of percent by mass in the earth's crust?

(a) Silicon (b) Oxygen
(c) Carbon (d) Calcium

Ans. (b) : Oxygen is the most abundant element in the earth's crust. It is estimated that oxygen comprises nearly half of the mass of the crust. It accounts for 21% of Earth atmosphere.

Oxygen	–	46.6% of Earth Mass
Silicon	–	27.7% of Earth Mass
Aluminum	–	8.1% of Earth Mass
Calcium	–	3.6% of Earth mass

INDIAN CONSTITUTION AND POLITY

62. Which one of the following was NOT proposed by the 73rd constitutional amendment in the area of Panchayati Raj?

(a) Thirty percent seats in all elected rural local bodies will be reserved for women candidates at all levels
(b) The states will constitute their Finance Commissions to allocate resource to Panchayati Raj institutions
(c) The Panchayati Raj elected functionaries will be disqualified to hold their offices if they have more than two children
