(a) 25m 20 cm
(b) 50 m 40 cm
(c) 75 m 60 cm
(d) 100 m 80 cm

Ans. (a)
On taking L.C.M. of 40, 42 and 45:-
(a) L.C.M. = 2 × 2 × 2 × 3 × 3 × 5 × 7
= 2520cm

Required minimum distance = $\frac{2520}{100}$m

= 25.20m

⇒ 25m 20 cm

63. A person has only Rs. 1 and Rs. 2 coins with her. If the total number of coins that she has is 50 and the amount of money with her is Rs. 75, then the number of Rs. 1 and Rs. 2 coins are, respectively.
(a) 15 and 35
(b) 35 and 15
(c) 30 and 20
(d) 25 and 25

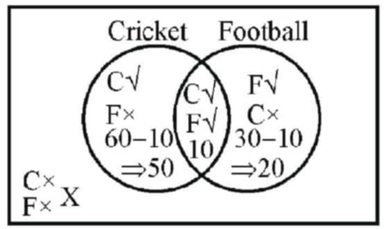

Ans. (d)
Let the number of 1 ₹ coins = x
∴ the number of 2 ₹ coins = (50 – x)
then,
x × 1 + (50 – x) 2 = 75
x + 100 –2x = 75
100 – x = 75
x = 25
∴ y = 50 – x
= 50 – 25
Hence,
The number of Rs. 1 and Rs. 2 coins are 25 and 25 respectively.

64. If a bus travels 160 km in 4 hours and a train travels 320 km in 5 hours at uniform speeds, then what is the ratio of the distances traveled by them in one hour?
(a) 8 : 5
(b) 5 : 8
(c) 4 : 5
(d) 1 : 2

Ans. (b)
Covered distance by Bus in one hour = $\frac{160}{4}$
= 40 cm
and covered distance by train in one hour = $\frac{320}{5}$
= 64 cm
∴ Required Ratio = 40 : 64
= 5 : 8

65. There are 100 students in a particular class. 60% students play cricket, 30% student play football and 10% students play both the games. What is the number of students who play neither cricket nor football?
(a) 25
(b) 20
(c) 18
(d) 15

Ans. (b)
By Venn diagram:-

Where,
C√ ⇒ play cricket
F√ ⇒ play football
C× ⇒ don't play cricket
F× ⇒ don't play football
Let the number of students who play neither cricket nor football x
∴ x + 50 + 10 20 = 100
x + 80 = 100
x = 100 – 80
x = 20

66. A village having a population of 4000 requires 150 litres of water per head per day. It has a tank measuring 20m×15m×6m. The water of this tank will last for.
(a) 2 days
(b) 3 days
(c) 4 days
(d) 5 days

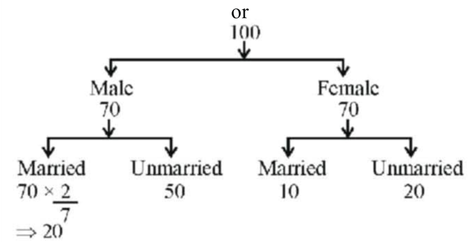

Ans. (b)
∵ Per head per day requires water = 150 liters
∴ The total population of 4000 requires
water = 150 × 4000
= 600000 liters
∵ Volume of Tank = 20m × 15m × 6m
= 1800 m^3
∵ 1m^3 = 1000 liters
∴ Capacity of Tank = 1800 × 1000
= 1800000 liters
Required days = $\frac{1800000}{600000}$ = 3 days.

67. A student on her first 3 rests received and average scor of N points. If she exceeds her previous average score by 20 points on her fourth test, then what is the average score for the first 4 tests ?
(a) N + 20
(b) N + 10
(c) N + 4
(d) N + 5

Ans. (d)
∵ the average of
first three test = N
∴ The total score of first + three test = 3 N
According to question,
The total score of first (3N + (N + 20))
Four test
⇒ 4N + 20
∴ Required Average = $\frac{4N+20}{4}$
= (N + 5)

68. In a group of persons, 70% of the persons are male and 30% of the persons are married. If two sevenths of the males are married, what fraction of the females is single ?
(a) 2/7 (b) 1/3
(c) 3/7 (d) 2/3

Ans. (d)
Let the total number of person = 100
∴ Males = 70
females = 30
∵ total number of married person = 30
and total number of married males = 70 × 2/7
⇒ 20
∴ The total number of married females = 30 – 20
⇒ 10
Then
Total number of unmarried females
= 30 – 10
⇒ 20
∴ Required fraction = $\frac{20}{30}$
⇒ $\frac{2}{3}$

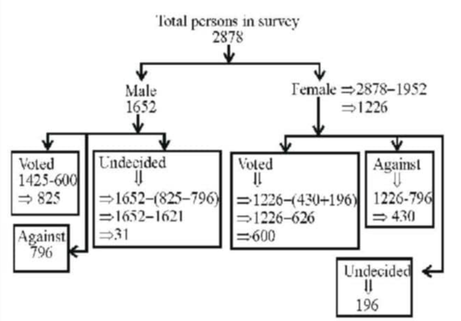

(∵ Total number of married = 30
∴ Female married = 30 – 20 = 10)
Required fraction = $\frac{20}{30}$
= $\frac{2}{3}$

Read the following passage and answer the 3 (three) items that follow :
In a survey regarding a proposed measure to be introduced, 2878 persons took part of which 1652 were males. 1226 persons voted against the proposal of which 796 were males. 1425 persons voted for the proposal. 196 females were undecided.

Flow chart from question 69 to question 71.

Flow chart:-

69. How many females voted for the proposal?
(a) 430 (b) 600
