Ans. (b) In the Given figure shown-
The triangle is moving down.
The semi-circle is moving in antilock wise direction and only covering the square areas.
So, the figure to fifth stage will be option 2, as shown above.
Hence, option 2, is the correct answer.

Directions for the following 2 (two) items –In each item, there are two sets of figures, first four figures named Problem figures and next four figures named Answer figures indicated as (a), (b), (c) and (d). The problem figures follow a particular sequence, In accordance with the same, which one of the four answer figures should appear as the fifth figure?

40. Problem figures

Answer figures

(a) (b) (c) (d)

Ans. (c) In each step arrow [↑] symbol is inverting 180° and cross circle [⊕] symbol in each step touches one vertex of triangle in clock wise direction.
Hence, option (c) is the correct answer.

41. Problem figures

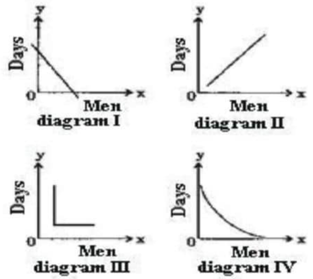

Answer figures

(a) (b) (c) (d)

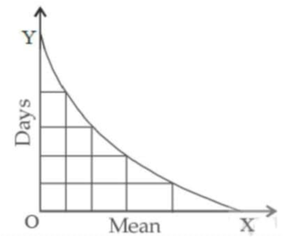

Ans. (a) From figure (1) to (2), 2nd and 3rd design makes a pair and comes forward while 1st design gets 180° inverted. Same from figure (2) and (3) and figure (3) to (4).
Hence, option (b) is correct answer.

42. Consider the following diagrams :
x men, working at constant speed, do a certain job in y days. Which one the these diagrams shows the relation between x and y?

(a) diagram I (b) diagram II
(c) diagram III (d) diagram IV

Ans. (d) Time taken to finish a work is inversely proportional to the number of persons working at it.
∴ More persons then less is the time taken to finish a job. Hence, diagram IV represents the relation between X and Y.

43. Consider the following matrix ?

3	370	7
2	224	6
1	730	X

What is the number at 'X' in the above matrix ?
(a) 5 (b) 8
(c) 9 (d) 11

Ans. (c) Just as, $3^3 + 7^3 = 27 + 343 = 370$,
$2^3 + 6^3 = 8 + 216 = 224$
Similarly $1^3 + X^3 = 730 \Rightarrow X^3 = 730 - 1 \Rightarrow X^3 = 729$
$\Rightarrow x = (729)^{1/3} = (9^3)^{1/3} = 9$

44. Examine the following three figures in which the number follow a specific pattern :

84		81		88	
14	12	18	9	?	11

The missing number (?) in the third figure above is
(a) 7 (b) 16
(c) 21 (d) 28

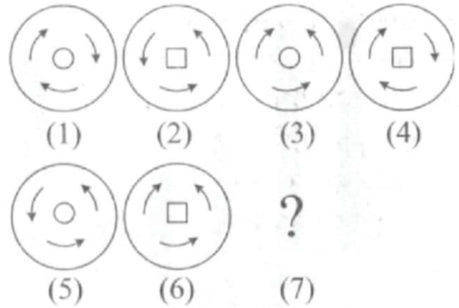

Ans. (b) Just as $1 : 12 \times \frac{14}{2} = 12 \times 7 = 84$

$2 : 9 \times \frac{18}{2} = 9 \times 9 = 81$

Similarly $11 \times \frac{?}{2} = 88$

$\therefore ? = \frac{88 \times 2}{11} = 8 \times 2 = 16$

45. Consider the following figures :

Which one of the following figures would logically come in the 7th position indicated above by a question mark ?

(a) 
(b) 
(c) 
(d) 

Ans. (d) At first sight
∵Odd numbered figures have circle and even numbered figures have squares.
∴ Seven numbered figure will have a circle.
At second sight,
Similarly the sign of the arrow of the first figure
= The sign of arrow of the 4th figure
= The sign of arrow of 7th figure
Just as, The sign of the arrow of the second figure
= The sign of the arrow of 5th figure
The sign of the arrow of the IIIrd figure
= The sign of the arrow of 6th figure

Direction for the following 3 (three) items :

Read the following passage and answer the three items that follow :

A tennis coach is trying to put together a team of four players for the forthcoming tournament. For this 7 players are available :

males A, B and C; and females W, X, Y and Z. All players have equal capability and at least 2 males will be there in the team . For a team of four, all players must be able to play with each other. But, B cannot play with W, C cannot play with Z and W cannot play with Y.

Solution for (46 to 48):-

Given that,
Condition (I)-

Male	Females
A	W
B	X
C	Y
	Z

Condition (II)-

B ×—— W
C ×—— Z
W ×—— Y

Condition (III)- At least 2 males will be in the team.

46. If B is selected and Y is rejected, the team will consist of which one of the following groups ?
(a) A, B, C and W
(b) A, B, C and Z
(c) A, B, C and X
(d) A, W, Y and Z

Ans. (c) If B is selected and y is rejected, then the team will be:-
A, B, C X or A, B, X, Z

47. If all the three males are selected, then how many combinations of four member teams are possible?
(a) 1 (b) 2
(c) 3 (d) 4

Ans. (b) If all the three males are selected, Then the possible combinations:-
(A, B, C, X), (A, B, C, Y)
Hence, the number of possible combinations is 2.

48. If Y is selected and B is rejected, the team will consist of which one the following groups ?
(a) A, C, W and Y
(b) A, C, X and Y
(c) A, C, Y and Z
(d) A, W, Y and Z

Ans. (b) If y is selected and B is rejected then the team will be:-
(A, C, X, Y)

49. Five people A,B,C,D and E are seated about a round table. Every chair is spaced equidistant from adjacent chairs.
(i) C is seated next to A.
(ii) A is seated two seats from D.
(iii) B is not seated next to A.
Which of the following must be true ?
(I) D is seated next to B.
(II) E is seated next to A
