26. With reference to the above passage, the following assumptions have been made :

1. **The strategy of conservation of wildlife by relocating them from one protected area to another is not often successful.**
2. **India does not have suitable legislation to save the tigers, and its conservation efforts have failed which forced the tigers to live outside protected areas.**

Which of the above assumptions is/are valid?

(a) 1 only (b) 2 only
(c) Both 1 and 2 (d) Neither 1 nor 2

Ans. (a) The concept given in the passage throws light regarding the sanctuary, in which the male tiger was removed from the pench tiger reserve and kept in the Panna National Park, this tiger traveled a long distance of 250 miles towards its home. This journey of the tiger alone sheds light on this crisis. Therefore, from this statement, the strategy of conserving wildlife, which has changed from one protected areas to another protected areas, is often not successful, so option (a) is correct.

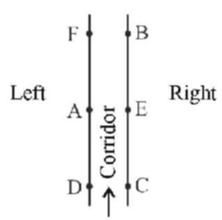

GENERAL MENTAL ABILITY

Direction for the following 2 (two) items :
Read the following information and answer the two items that follow.
The plan of an office block for six officers A, B, C, D, E and F is as follows : Both B and C occupy offices to the right of the corridor (as one enters the office block) and A occupies on the left of the corridor. E and F occupy offices on opposite sides of the corridor but their offices do not face each other. The offices of C and D face each other. E does not have a corner office. F's office is further down the corridor than A's, but on the same side.

27. If E sits in his office and faces the corridor, whose office is to his left?

(a) A (b) B
(c) C (d) D

Ans. (c)

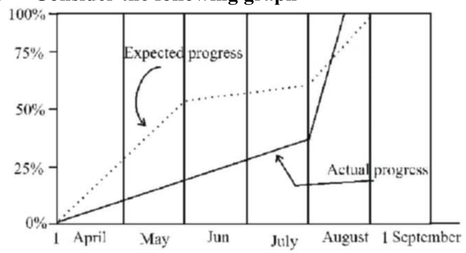

From the figure,
If E sits in his office and faces the corridor, to his left will be c's office.

28. Who is/are F's immediate neighbor

(a) A only (b) A and D
(c) C only (d) B and C

Ans. (a) From the figure,
F's immediate neighbor is only A.

29. Consider the following graph

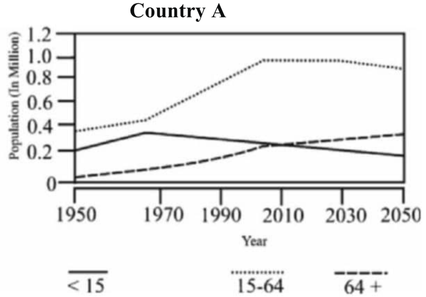

Which one of the following statements is not correct with reference to the graph given above?

(a) On 1st June, the actual progress of work was less than expected.
(b) The actual rate of progress of work was the greatest during the month of August.
(c) The work was actually completed before the expected time.
(d) During the period from 1st April to 1st September, at no time was the actual progress more than the expected progress.

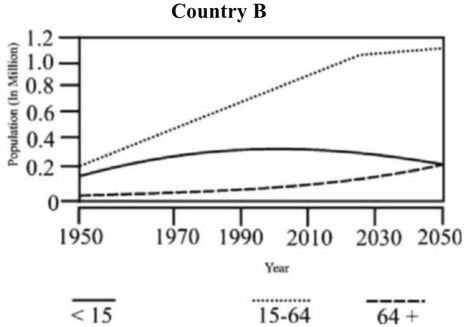

Ans. (d) Among the given options, option (d) is not correct. In the period from 1st April to 1st September, the actual progress at about 15th august was more than the expected progress.

30. Consider the following graphs. The curve in the graphs indicate different age groups in the populations of two countries A and B over a period of few decades :

Country A

Country B

With reference to the above graphs, which of the following are the most logical and rational inferences that can be made?

1. **Over the last two and a half decades, the dependency ratio for country B has decreased.**
2. **By the end of next two and a half decades, the dependency ratio of country A will be much less than that country B.**
3. **In the next two decades the work. force relative to its total population will increase in country B as compared to country A.**

Select the correct answer using the code given below.

(a) 1 and 2 only (b) 2 and 3 only
(c) 1 and 3 only (d) 1, 2 and 3

Ans. (c) From the given graphs Age groups of < 15 and more than 64 + = Dependent population and age group of 15 to 64 years = work force population.

Dependency ratio% of population

$$= \frac{<15\text{yr} + \%\text{ of population} > (64\text{ years})}{\%\text{ of working age population}(15-64)} \times 100$$

If we look at statement (2), i.e., by 2050 dependency ratio of country A < country B.
Country A dependency ratio is 2050.
<15 yr population A = 0.2 million
64 yr population A = 0.3 millions
15 to 64 yrs population A = 0.9 millions

$$\therefore \text{Dependency ratio A} = \frac{0.2\text{to}3}{0.9} = \frac{5}{9} \times 100$$

$$= 55.5\%$$

Country B dependency ratio in 2050.
< 15 yr population B = 0.2
< + 64 yr population B = 0.2
15 to 64 yr population B = 11
∴ Dependency ratio

$$B = \frac{0.2 + 0.2}{1.1} \times 100 = 36.36\%$$

∴ Option (c) is the correct answer.

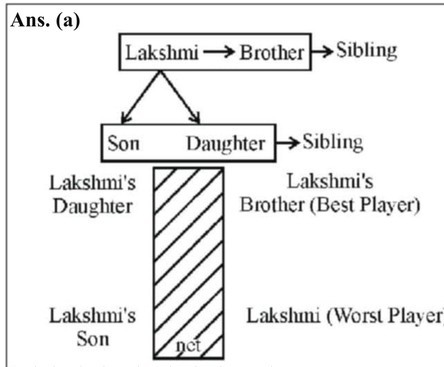

31. Lakshmi, her brother, her daughter and her son are badminton players. A game of doubles is about to begins :

(i) Lakshmi's brother is directly across the net from her daughter.
(ii) Her son is diagonally across the net from the worst player's sibling.
(iii) The best player and the worst player are on the same side of the net.

Who is the best player?

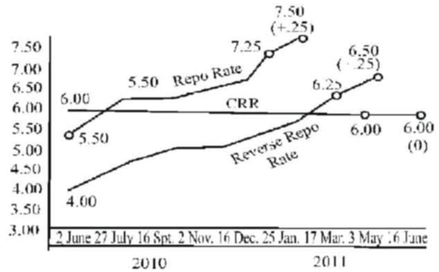

(a) Her brother (b) Her daughter
(c) Her son (d) Lakshmi

Ans. (a)

Lakshmi's brother is the best player.

32. The graph given below indicates the changes in key policy rates made by the Central Bank several times in a year :
Which one of the following can be the most likely reason for the Central Bank for such an action?

(a) Encouraging foreign investment
(b) Increasing the liquidity
(c) Encouraging both public and private savings
(d) Anti - inflationary stance

Ans. (d) The picture shows that when the repo rate is rising, the central bank is trying to correct inflation by reducing liquidity. Hence, option (d) is correct.

Directions for the following 2 (two) items :
The following table gives the GDP growth rate and Tele-density data of different States of a country in a particular year. Study the table and answer the two items follow.

States	Per capita income	GDP growth rate (%)	Tele-density
State 1	704	9.52	70.27
State 2	419	5.31	35.88
State 3	254	10.83	50.07
State 4	545	9.78	5.94
State 5	891	10.8	76.12
State 6	1077	11.69	77.5
State 7	900	8.88	104.86
State 8	395	5.92	6
