Passage – 4

A central message of modern developed economic is the importance of income growth, be which is meant growth in Gross Domestic Product (GDP). In theory, rising GDP creates employment and investment opportunities. As incomes grow in a country where the level of GDP was once lows, household, communities, and governments are increasingly able to set aside some funds for the production of things that make for a good life. Today GDP has assumed such a significant pace in the development lexicon, that if someone mentions "economic growth", we know they means growth in GDP.

19. With reference to the above passage, the following assumptions have been made :

1. Rising GDP is essential for a country to be a developed country.
2. Rising GDP guarantees a reasonable distribution of income to all households.

Which of the above assumptions is/are valid?

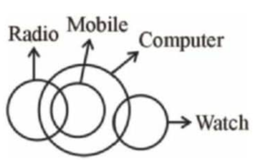

(a) 1 only (b) 2 only
(c) Both 1 and 2 (d) Neither 1 nor 2

Ans. (d) : From the given passage, both statement 1 and 2 are incorrect.
Let assume from statement 1. only rising GDP cannot be said as essential criteri2a for a develop country but income redistribution also plays a critical role as mentioned in the passage, from the statement 2 no where mentions in the passage that rising GDP guarantees reasonable distribution to all households.

20. A statement followed by Conclusion-I and Conclusion-II is given below. You have to take the Statement to be true even if it seems to be at variance from the commonly known facts. Read all Conclusions and then decide which of the given Conclusion (s) logically follows/follow from the Statement, disregarding the commonly know facts.

Statement : Some radios are mobiles, All mobiles are computers. Some computer are watches.
Conclusion-I : Certainly some radios are watches.
Conclusion-II : Certainly some mobiles are watches.
Which one of the following is correct?
(a) Only Conclusion-I
(b) Only Conclusion-II
(c) Both Conclusion-I and Conclusion-II
(d) Neither Conclusion-I nor Conclusion-II

Ans. (d) :

Hence,
Neither conclusion-I nor Conclusion-II is correct.

Directions for the following 4 (four) items :
Read the following four passage and answer the items that follow. Your answers to these items should be based on the passages only.

Passage-1

Fig trees (genus Ficus) are considered sacred in India, East Asia and Africa and are common in agricultural and urban landscaped where other large trees are absent. In natural forests, fig three provide food for wildlife when other resources are scarce and support a high density and diversity of freugivores (fruit-eating animals). If frugivorous birds and basts continue to visit fig trees located in sites with high human disturbance, sacred fig trees may promote frugivore abundance. Under favourable microclimate, plenty of seedlings of other tree species would around fig trees.

21. On the basis of the passage given above, the following assumptions have been made :

1. Fig trees can often be keystone species in natural forests.
2. Fig trees can grow where other large woody species cannot grow.
3. Sacred trees can have a role in biodiversity conservation.
4. Fig trees have a role in the seed dispersal of other species.

Which of the above assumptions is/are valid?

(a) 1 and 2 only
(b) 3 only
(c) 2 and 4 only
(d) 1, 3 and 4 only

Ans. (d) : In the given passage Assumption I is valid as the passage explains the importance of the fig trees species in natural forests (Ecosystem).
Assumption 3 is relevant from the passage, as the sacred grooves have protection from the humans, resulting in conservation of the same.
Assumption 4 is valid, as given in the passage, "plenty of seedlings of other trees species would grow around fig tree".
Assumption 2 cannot be concluded from the given passage, as the definition of large woody species is not specified.
Hence, option (d) is correct.

Passage – 2

At the heart of agroecology is the idea that agroecosystems should mimic the biodiversity levels and functioning of natural ecosystems. Such agricultural mimics, like their natural models, can by productive, pest-resistant, nutrient conserving, and resilient to shocks and stresses. In ecosystems there is no 'waste', nutrients are recycled indefinitely. Agroecology aims at closing nutrient loops, i.e., returning all nutrients that come out of the soil back to the soil such as through application of farmyard manure. It also harnesses natural processes to control pests and build soil fertility i.e., through intercropping. Agroecological practices include integrating threes with livestock and crops.

22. Consider the following :

1. Cover corps
2. Fertigation
3. Hydroponics
4. Mixed farming
5. Polyculture
6. Vertical farming

Which of the above farming practices can be compatible with agroecology, as implied by the passage?

(a) 1, 4 and 5 only
(b) 2, 3, 4 and 5 only
(c) 1, 2 3 and 6 only
(d) 4 and 6 only

Ans. (a) : From the given passage, the forming practices of fertigation and Hydroponics are artificial methods and are not compatible with agroecological systems mentioned in the passage. So, these two practices can be eliminated.
The vertical farming akin to hydroponics is soilless farming and hence not compatible with agroecology. So it can also be eliminated.
So the farming practices compatible with cover cropping, mixed farming and Polyculture.
Hence, option (a) is correct.

Passage – 3

Computers increasingly deal not just with abstract date like credit card details and databases, but also with the real world of physical objects and vulnerable human bodies. A modern car is a computer on wheels; an aeroplance is a computer on wings. The arrival of the "Internet of Things" will see computers baked into everything from road signs and MRI scanners to prosthetics and insulin pumps. There is little evidence that these gadgets will be any more trustworthy than their desktop counterparts. Hackers have already proved that they can take remote control of internet connected cars and pacemakers.

23. Which on the following statements best reflects the most critical inference that can be made from the passage given above?

(a) Computers are not completely safe
(b) Companies producing the software do not take cyber security seriously
(c) Stringent data security laws are needed
(d) The present trend of communication technologies will affect our lives in future

Ans. (a) : According to the last paragraph in the given passage "Hackers have already proved that they can take remote control of internet connected car and pace Makers", it indicate clearly that computers are not completely safe. Hence, option (a) is correct.
Option (b) is not mentioned anywhere in the passage. Option (c) is a final goal we have to target, but that not the inference that can be drawn from the passage.

Passage – 4

A social and physical environment riddled with poverty, inequities, unhygienic and insanitary conditions generates the risk of infectious diseases. Hygiene has different levels : personal, domestic and community hygiene. There is no doubt that personal cleanliness being down the rate of infections diseases. But the entry of the market into this domain has created a false sense of security that gets conditioned and reinforced by the onslaught of advertisements. Experience in Western Europe shows that along with personal hygiene, general improvements in environmental conditions and components like clean water, sanitation and food security have brought down infant/child death/infection rates considerably. The obsession with hand hygiene also brings in the persisting influence of the market on personal health, overriding or marginalising the negative impact on ecology and the emergence of resistant germs.

24. On the basis of the passage given above, the following assumptions have been made :

1. People who are obsessed with personal hygiene tend to ignore the community hygiene.
2. Emergence of multi-drug resistant germs can be prevented by personal cleanliness.
3. Entry of the market in the domain of hygiene increases the risk of infectious diseases.
4. Scientific and micro-level interventions are not sufficient to being down the burden of infectious diseases.
5. It is community hygiene implemented through public health measures that is really effective in the battle against infectious diseases.

Which of the above assumptions are valid?

(a) 1 and 2 only (b) 3 and 4 only
(c) 4 and 5 only (d) 1, 2 and 4

Ans. (c) : From the given passage, the Experiences from western Europe have established the direct role of community hygiene through public measures effective in reducing infections diseases and death rates. Hence statement 5 stands a valid assumption. Scientific and Micro-level interventions referring to personal and domestic hygiene not sufficient to be bring down the burden of diseases can be directly inferred from the essence of the passage. Thus the statement a stands as a valid assumption. Rest of all statements are incorrect.
Hence, option (c) is correct.

GENERAL MENTAL APTITUDE

25. There are 6 persons arranged in a row. Another person has to shake hands with 3 of them so that he should not shake hands with two consecutive persons. In how many distinct possible combinations can the handshakes take place?

(a) 3 (b) 4
(c) 5 (d) 6
