Slither slither

Along with lizards, snakes are members of the *Squamata* group. Snakes do not have hands and feet. Instead, they have a flexible body, which they use to wriggle and crawl over land – as well as for swimming through water. Their scales help them to grip surfaces.

Stretch marks
A snake's skeleton is simply a skull and a long, flexible backbone with ribs attached. Muscles joined to the ribs allow the snake to twist and coil its long, flexible body.

Worried rattlesnakes raise their tails...

"Buzz" off
This western diamondback rattlesnake has a poisonous bite, but it does not like to waste its venom (poison). It always uses its rattle first, hoping that this will be enough to scare off its enemy.
