compensation, wages or profit are workers. The Reference period for determining a person as worker and non-worker is one year preceding the date of enumeration.

The Census *classifies* 'Workers' into two groups namely, *Main Workers* (those workers who had worked for the major part of the reference period, i.e., 6 months or more) and *Marginal Workers* (those workers who had not worked for the major part of the reference period i.e. less than 6 months). The *Main* workers are classified on the basis of Industrial category of workers into the following four categories: (i) Cultivators; (ii) Agricultural Labourers; (iii) Household Industry Workers; and (iv) Other Workers.

[See entry *'Non-Worker'* also.]

WORKER POPULATION RATIO

The employment-to-population ratio is defined as the proportion of an economy's working-age population that is employed. As an indicator, the employment-to-population ratio provides information on the ability of an economy to create jobs. Worker population ratio (WPR) is defined as the number of persons employed per thousand persons [WPR= No. of employed persons X 1000/Total population]. Worker Population Ratio is an indicator used for analyzing the employment situation in the country. This is also useful in knowing the proportion of population that is actively contributing to the production of goods and services in the economy.
