challenges. Now it depends upon the choice of the countries as to which set of principles and theories they select for solving their economic challenges. Now many countries selecting same remedy and tools to fight the same problems might have similar or dissimilar results during a given period. At the same time, two economies selecting different tools to solve the same economic problems might experience the same results or completely different results. Why this is so?

Basically, economic theories are expectations of human behaviour about their economic activities and as human behaviour depends greatly on many internal and external factors, the results are likely to show diversities. The level and quality of natural resources, the quantity and quality of human resources, the socio-political milieu, the historical background, the psychic make of the human resource, etc. are some of the factors which individually as well as collectively impact an economy while carrying out economic activities. These things make it highly difficult for economists to say and forecast the kind of impact a particular economic policy will have on a particular economic setting. Ultimately, implementation and delivery system, all play a highly vital role in solving economic challenges in a country, which economists started studying after the 1960s. Therefore, it is correct to say that economics has less diversity than the economies. There will not be any exaggeration if we say that no two economies of the world are exactly the same, though we might classify them into broader terms like developed and developing, agrarian and industrial, etc.

This diversity makes economics a highly interesting discipline. And via the diverse faces of the economies the economists have been able to modify and remodify their ideas on the subject of economics. The evolutionary history of economics is nothing but modifications in the past theories on the basis of contemporary results and experiences of the economies. It is right to say that economics has developed out of real life practices and it is from the practice to theory. As the practices will be having newer dimensions, the theories of economics will also have newer and more imaginative dimensions.
