production and with use of costlier inputs, the produce of such a farming will not be economically accessible by the vast poor population of India (already due to costlier outputs, of the GR masses lack the required purchasing capacity). That is why ***'cost cut'*** is an integral part of this revolution. And that is why agro-scientists have suggested to base our agriculture on ***biotechnology***. Use of biotechnology in agriculture does not only open new dimensions for it but it has every potential to cut costs of the agricultural products by doing miraculous and unthinkable kind of research and development. India is very much aware of this reality that without an active support of biotechnology, sustainable agricultural development will have only elitist value and nothing else.[58]

2. *Value Addition:* Indian agriculture has been lacking the aspect of value addition. In Indian agriculture sector right from farmers to the traders there has been a tendency of deposing agricultural goods in its primary form. That is why the real potential of Indian agriculture to create gainful employment has never been tapped. This green revolution tries to go for it in a big way. In this direction there will be an increased emphasis upon agro-processing, beverages and drinks industries.

3. *Strengthening the Infrastructural/Institutional Aspects:* The last coordinate of the Second Green Revolution is related to the aspects of timely and adequate infrastructural/institutional support without which it cannot happen:

(a) We need to strenghen the ***credit delivery*** aspects for the agriculture sector—both at micro level and at macro level (for corporate farming).

(b) The ***storage facilities*** for agricultural products in India is among the weakest in the world. India does not have adequate capacity of dry godowns and cold storage. In the area of refrigerated storage, much needs to be done. A beginning has been made recently by the Railways with the initiation of the refrigerated station wagons. Basically, private sector participation is considered very vital for the growth of this segment.
