developing worlds alike. India is no exception to it better say it has been among few countries in the world spear-heading the campaign against the biased provisions of the WTO concerning agriculture.

India was skeptical about the issue even before joining the organisation but once it became a part of it, it started assessing the situation objectively and moved towards crisis mitigation. Globalisation as such opened unlimited prospects for the economies but at the same time brought several challenges, too. Yes, the challenges were different in nature for the developed and the developing countries. We need to enquire the prospects and the challenges brought by the WTO for the Indian agriculture.

Had the agriculture of the leading and politically vocal developing economies' not be of subsistence level, the course of the world would have been completely different. It is the biggest hurdle in the process of globalisation and the success of the World Trade Organisation! Yes, the process of converting the sector into industry has already started in most of the leading developing economies amidst tough resistance from the farmers, political parties and the NGOs (non-government organisations) alike.

THE PROSPECTS

The oldest and the first document regarding the impact of the implementation of the provisions of the WTO, Uruguay Round (1995–2005) was prepared jointly by the *World Bank*, the *GATT*[62] and the *OECD*[63]. According to the joint document, the WTO provisions were supposed to have the following positive impacts on the world trade:

1. By 2005 there will be an addition of $745 billion in the world merchandise trade.[64]
2. The ***GATT Secretariat*** provided a full break-up of the above-projected trade increase in the following way:
   (i) The clothing sector to have a share of 60 per cent.
   (ii) The agricultural, forestry and fisheries products to have a share of 20 per cent.
