(iii) The processed food, beverages and drinks to have a share of 19 per cent.

It means that due to the implementation of the WTO provisions, there will be only ***one per cent*** increase in the trade of all other goods excluding the above-cited sectors. It was a highly inflated view and became a matter of debate around the world. But the areas which were projected to have very high increase in their trade were not mere projections either. Member countries went home and started going for their own studies, estimations and projections—India being no exception. We must see the assessment of India:

(i) The products which were projected to have the maximum increase in their trade, India had a traditional great export potential in them. It means the WTO has a great prospect for agriculture in store as maximum goods fell in the agriculture sector. Assuming that India's share in the world exports improves from 0.5 per cent to 1.0 per cent, and India is able to take advantage of the opportunities that are created, the trade gains may conservatively be placed at $2.7 billion extra exports per year. A more generous estimate will range from $3.5 to $7 billion worth extra exports.[65]

(ii) The NCAER (National Council for Applied Economic Research) survey of the WTO on the Indian economy is cited as the best document in this area. The survey[66] had all important things to say on this issue:

(a) The exports of agricultural products will be boosted by the WTO accepted regime.

(b) Only the foodgrains trade that too of wheat and rice were projected to be around $270 billion.

(c) The survey also pointed out that almsot 80–90 per cent of the increased supply of foodgrains to the world is going to originate from only two countries China and India as they are having the scope for increasing production.

(d) But the survey painted a very wretched picture about the preparedness of Indian agriculture sector to exploit the
