opportunities. It concluded China to be far far better than India is this matter.

(e) It suggested almost every form of preparedness for the agriculture sector (its glance we may have been on the second Green Revolution in India—basically the revolution is modelled on the findings and suggestions by the survey).

(f) Lastly, the survey ended at a high note of caution and concern that if India fails in its preparations to make agriculture come out as a winner in the WTO regime the economy will emerge as the biggest importer of the agricultural products. At the same time the cheaper agri-imports might devastate Indian agricultural structure and the import-dependence may ruin the prospects of a better life for millions of poor Indians.

(g) Even if India does not want to tap the opportunities of the globalising world it has to gear up in the agriculture sector since the world market will hardly be able to fulfill the agri-goods demands of India by 2025 AD. It means, it is only India which can meet its own agri-goods demand in the future.

There is no doubt in it that the WTO has brought problably ***the last opportunity*** to make our masses have better income and standard of living via better income coming from agriculture. But provided we go for the right kind of preparation at the right time. There are enough prospects, undoubtedly.

The Challenges[67]

If the WTO brings high prospects for the Indian agriculture, it also brings in some hard-boiled challenges in front of it. These could be seen as individual challenges of the similar economies as well as joint challenges of such economies. The ***first*** category of challenges pertains to the area of relavent preparations, investment and restructuring of the agriculture. And the ***second*** category of challenges are nothing less than a revision in the very agricultural provisions of the WTO itself (around which today revolves the success and faliure of the organisation itself!). We may take a look at the challenges before the Indian agriculture:
