(i) *Self-sufficiency of food:* Due to inflow of cheaper foodgrains from the world it would not remain economically viable in India to produce them and farmers might incline in favour of the profitable agri-products. This will make India heavily dependent upon the world market for its food supplies marring its achievement of food self-sufficiency. This will have serious political and ethical outcomes for India[68].

(ii) *Price Stability:* Dependence on the world market for the supply of agricultural products and specially for foodgrains will never be safe for India. As the international market for the products is highly speculative and full of variations (due to natural factors) the price stability will be always in danger—fluctuations hamper the producers and consumers of the agri-goods in India. It would be very tough fighting *dumping* of the surplus agri-goods from other countries.

(iii) *Cropping Pattern:* The cropping pattern of agriculture might take a very imbalanced shape which will be highly detrimental to the ecology at large[69] as the farmers will be always in favour of going for the crops and commodities which have comparative price advantage.

(iv) *Weaker Sections:* The benefits of globalisation may not be neutral to areas, crops and the people. There will never prevail a certainty as to which area/region or crops or the people are going to benefit from, globalisation in which year. At the same time globalisation is a process where profits can be made but it is a market-based concept. Those who are unable to produce due to lack of capital, investment and entrepreneurship will have no gains from it. They will be net consumers or buyers. Since India has a vast population of the weaker sections (as other third world countries have) this population will neither be able to increase its income nor able to purchase the agri-goods having no price stability.

It means that the weaker sections of India might miss this chance of growth and development. We need to make the benefits of globalisation reach these people, too. This could be done by a timely and society-orientied public policy which is a big challenge[70].
