Export Subsidies

For export subsidy the WTO has provisions in two categories—

(i) Reduction in the total budgetary support on export subsidies, and

(ii) Reduction in the total quantity of exports covered by the subsidy.

Higher reduction commitment for the developed countries and lower for the developing countries are the provisions. But the developed nations forward such an inflated support to their agricultural exports that even after the committed reductions it will be highly price distorting against the agri-exports of the developing countries. It is therefore opposed by the developing countries.

Sanitary and Phytosanitary Measures

The provisions of the WTO allow member countries to set their own health and safety standards provided they are justified on scientific grounds and do not result in arbitrary or unjustified barrier to trade. The provisions encourage use of international standards and also include certain special and differential treatment in favour of the developing countries.[85]

Though this provision has realised the scope of unjustified kind of health and phytosanitory measures on the developing countries, the developed nations have been beautifully able to do so by validating their health and related rules on scientific grounds. Such instances have distorted the trade in favour of these countries and the developing countries' agriculture has been the real loser. The developing countries accuse such measures as the non-tarrif barriers used by the developed nations to block goods from the developing nations.

NAMA

The Non-Agricultural Products Market Access (NAMA) is a part of the WTO provisions which deals with the idea of encouraging market reach to the non-agricultural goods of the member countries.[86] But the encouragement was objected/opposed by the developing countries specially pointing to the non-tariff barriers enforced by the developed countries. At the Doha Ministerial Conference (November 2001) ministers agreed to start
