70. The primary examples of corporate and contract farming have given enough hints that economically weaker sections of society have meagre chances of benefitting from the globalisation of agriculture—with major profits going to the corporate houses. Naturally, the governments (centre and states) will need to come up with highly effective policies which could take care of the economic interests of the masses.

    The policies may focus on areas such as ***healthcare, education, insurance, housing, social security,*** etc. Already the governments have started emphasising the delivery and performance of the ***social sector*** but in the future, more focused and accountable programmes in the sector will be required.

71. Some of the developed economies are still forwarding subsidies to the agricultural areas to the tune of 180–220 per cent! Again, the justification for such high subsidies have been provided by defining agriculture subsidies according to their ease—highly blurring and confusing.

72. Because even the agriculture related provisions are modified the global market will always run after the agri-products which are the best—pricewise, qualitywise, etc.

80. Basically, a large part of this box is used by the farmers in the USA and the European Union as basic investments in agriculture. India as well as other like-minded countries have this view and want this box to be brought under the AMS i.e. under the reduction commitments. The USA at the Hongkong Ministerial meet (December 2005) announced to abolish such subsidies in the next 12 year commencing 2008. The EU also proposed to reduce its 'trade distorting subsidies' by 70 per cent. None of them used the name green box which shows some internal vagueness.
