countries could be considered visionaries which was to be proved by mid-1990!

Though at practical levels, the world looked flat for the mixed economy, a formal opinion on the goodness, immediacy and the ultimate viability of the mixed economy was yet to emerge. The first such authoritative opinion, in this direction, came from the World Bank which accepted the goodness and the need of 'state intervention' in the economy[3]. This was a turning point in the world economic thinking as the World Bank (WB) and the International Monetary Fund (IMF) were the ardent votaries of the virtues of the free market economy.

The concluding consensus emerged with the publication of the World Development Report (1999) titled *Entering the 21st Century* in which the WB said, "Governments play a vital role in development, but there is no simple set of rules that tells them what to do." The WB went on to suggest in this important document that every country should determine the **areas** and the **extent** of the market and the state intervention depending upon its own stage of economic development, socio-political and other historical factors.

The last WB document had basically rejected both of the historically existing economic orders namely the free-market economy and the state economy—which meant Adam Smith and Karl Marx were cancelled and rejected outrightly, that too on the basis of the historical experiences of both the worlds. Rather, the document advocates for the 'mixture' of both the economic orders i.e. the mixed economy. The long-standing ideological dilemma as to whether the market economy or the state economy was the better or the best way of organising the economy was solved for all time to come. The document pin-pointed good things of both the systems and concluded that they don't have the relationship of dichotomy but that of complimentarity. The real issue is not whether to have market or the state but having both of them together makes more sense. Market economy might suit one economy while it might not suit another—due to the different socio-economic conditions of the economies in reference. Similarly, the state economy model might serve one economy but might not serve the other.
