products and units from the recently completed *4th all India Census-cum-Survey of MSME Sector* and accordingly putting in place a new system of regular monthly collection of data. After the system of data collection is in place, DC (MSME) may develop the ***index for the MSME sector separately.*** This monthly index will be finally dovetailed with the General Index of All-India IIP by assigning a proper weight through suitable methodological framework. This view was also endorsed by the CSO.

INDUSTRY & ENVIRONMENT

The development of a diversified industrial structure in India, based on a combination of large and small-scale industries, and growing urban and rural population have produced pressures on the environment as reflected in the growing incidence of air, water, and land degradation. Industrial pollution is *concentrated* in industries like petroleum refineries, textiles, pulp and paper, industrial chemicals, iron and steel, and non-metallic mineral products. *Small scale industries*, especially foundries, chemical manufacturing, and brick making, are also significant polluters. In the *power sector,* thermal power, which constitutes the bulk of installed capacity for electricity generation, is an important source of air pollution. Current situation[56] of industrial pollution is as given below:

- Analysis of long-term trends (1995-2009) of **air pollutants** shows that while SO_2 has been under control, NO_2 has exceeded permissible levels in 11-23 per cent cities during last the 15 years.
- Discharge of untreated or partially treated industrial **emissions** and effluents is the main cause of industrial pollution. Industrial effluents comprising organic pollutants, chemicals, and heavy metals and run-off from landbased activities such as mining are a major source of water pollution. The *major water-polluting industries* include fertilisers, refineries, pulp and paper, leather, metal plating, and other chemical industries.[57]
- Continued monitoring of water quality of aquatic resources has revealed that organic pollution continues to be the predominant
