of life was comparatively lower. The time had come to define economic development differently from what the world meant by economic growth. For economists, development indicates the quality of life in the economy which might be seen in accordance with the availability of so many variables such as:

(i) The level of nutrition.

(ii) The expansion and the reach of healthcare facilities—hospitals, medicines, safe drinking water, vaccination, sanitation, etc.

(iii) The level of education among the people.

(iv) There might be many more variables on which the quality of life depends.

Here, one basic thing must be kept in mind that if the masses are to be guaranteed with a basic minimum level of quality–enhancing inputs (above-given variables such as food, health, education, etc.) in their life, a minimum level of income has to be guaranteed for them. Income is generated from productive activities. It means that before assuring development we need to assure growth. Higher economic development requires higher economic growth. But it does not mean that a higher economic growth automatically brings in higher economic development—a confusion the early economists failed to clear. We may cite an example to understand the confusion—two families having same levels of income but spending differing amounts of money on the developmental aspects. One might be giving little attention to health, education and going for saving and the other might not be saving but taking possible care of the issues of health and education. Here the latter necessarily will have higher development in comparison to the former. Thus, we may have some diverse cases of growth and development:

(i) Higher growth and higher development

(ii) Higher growth but lower development

(iii) Lower growth but higher development.

Above-given combinations though, comparative in nature make one thing clear, that, just as for higher income and growth we need conscious efforts, same is true about the economic development and higher economic development. Without a conscious public policy, development has not been
