possible anywhere in the world. Similarly, we can say, that without growth there cannot be development either.

The first such instance of growth without development, which the economists saw, was in the Gulf countries. These economies, though they had far higher levels of income and growth, the levels of development there were not of comparable levels. Here then started the branch of economics which will be known as *'development economics'*. After the arrival of the WB and the IMF, conscious economic policies were framed and prescribed for the growth and development of the less-developed economies.

We can say that ***economic development is quantitative as well as qualitative progress*** in an economy.[3] It means, when we use the term growth we mean quantitative progress and when we use the term development we mean quantitative as well as qualitative progress. If economic growth is suitably used for development, it comes back to accelerate the growth and ultimately greater and greater population brought under the arena of development. Similarly, high growth with low development and ill-cared development finally results into fall in growth. Thus, there is a circular relationship between growth and development. This circular relationship broke down when the Great Depression occurred. Once the concept of the *'welfare state'* got established, development became a highly coveted and serious matter of concern for the governments of the world, policy makers and economists, alike. A whole new branch of economics—***welfare economics*** has its origin in the concept of welfare state and the immediacy of development.

Measuring Development

Although economists were able to articulate the differences between growth and development (Mahbub Ul Haq, a leading Pakistani economist had done it by early 1970s itself), it took some more time when the right method of measuring development could be developed. It was an established fact that the goal of progress goes beyond mere 'income increase'. International bodies such as the UNO, IMF and WB all were concerned about the development of the comparatively under developed regions of the world. But any attempt in this direction was only possible once there was a tool to
