(a) educational attainment among the adults (given 2/3rd weightage).

(b) school enrollment (given 1/3rd weightage).

(iii) ***Life Expectancy:*** to be calculated at the time of birth.

The UNDP ranked[5] the economies in accordance of their achievements on the above-given three parameters on the scale of one (i.e. 0.000–1.000). As per their achievements the countries were broadly classified into three categories with a range of points on the index:

(i) High Human Development Countries: 0.800–1.000 points on the index.

(ii) Medium Human Development Countries: 0.500–0.799 points on the index.

(iii) Low Human Development Countries: 0.000–0.499 points on the index.

The Human Development Report, 2013 is discussed in Chapter 22. together with India's relative position in the world.

The Debate Continues

Though the UNDP commissioned team had evolved a consensus as to what constitutes development, academicians and experts around the world have been debating this issue. By 1995 the economies around the world had officially accepted the concept of human development propounded by the UNDP. Basically, the UNDP designed HDR was used by the World Bank since 1990s to quantify the developmental efforts of the member countries and cheap developmental funds were allocated in accordance. Naturally, the member countries started emphasising on the parameters of income, education and life expectancy in their policy making and in this way the idea of HDI got obligatory or voluntary acceptance around the world.

For many years, experts and scholars came up with their own versions of defining development. They gave unequal weightage to the determinants defining development as well as selected some completely different parameters which could also denote development in a more suitable way according to them. Since quality is a matter of value judgement and a
