situation. It is an interim data.

(ii) Quick Estimate (QE)

Quick Estimate is a kind of revised estimate which shows the most latest situation and is useful in the process of going for future projections for some sector or sub-sector. It is an interim data.

(iii) Advance Estimate (AE)

Advance Estimate is a kind of quick estimate but done ahead (is advance) of the final stage when data should have been collected. It is an interim data.

Developmental and Non-developmental Expenditure

Total expenditure incurred by the government is classified into two segments—developmental and non-developmental. All expenditures of productive nature are developmental such as on the heads of new factories, dams, bridges, roads, railways, etc.—all *investments.*

The expenditures which are of consumptive kind and do not involve any production are non-developmental, i.e., paying salaries, pensions, interest payments, subsidies, defence expenses, etc.

This classification is not used in the Indian Public finance management now (see *Plan* and *Non-Plan Expenditure,* in the next entry).[6]

Plan and Non-Plan Expenditure

Every expenditure incurred on the public exchequer is classified into two categories—the plan and the non-plan. All those expenditures which are done in India in the name of *planning* is the *plan expenditure* and rest of all are *non-plan expenditures*. Basically, all asset creating, and productive expenditures are plan and all consumptive, non-productive, non-asset building are non-plan expenditures and are developmental and non-developmental expenditures, respectively.
