Basically, this includes all the repayment liabilities of the government on the items of the Other Receipts. The level of liabilities depends on the fact as to how much such receipts were made by the governments in the past. How much payment liabilities in which year also depends on the fact as to which years in the past the governments had other receipts and for what duration of maturity periods. As for example, the *PF liabilities* were not an item of such liabilities for almost first three decades after the independence. But once the government employees started retiring, it went on increasing. Future India (specially 1960s and 1970s) saw expansion of the PSUs and excessive employment generation in them (devoid of the logic of labour requirement). We see the PF liabilities expanding like anything throughout the 1990s—the governments had been under pressure to manage this segment either by cutting interest on PF or at present trying to make it a matter of market economy. Same thing happened with the element of *pension* and we have been able to devise a market mechanism for it once pension reforms took place and the arrival of a pension regulatory authority for the area.

Capital Deficit

There is no such term in public finance or in economics as such. But in practice one usually hears the use of the term capital crunch, scarcity of capital in day-to-day economic news items. Basically, the government in the news is facing the problem of managing as much funds, money, capital as is required by it for public expenditure. Such expenditure might be of revenue kind or capital kind. Such difficulties have always been with the developing economies due to their high level requirement of capital expenditures. Had there been a term to show this situation, it would naturally have been *Capital Deficit*.

Fiscal Deficit

When balance of the government's total receipts (i.e., revenue + capital reeipts) and total expenditures (i.e., revenue + capital expenditures) turns out to be negative, it shows the situation of fiscal deficit, a concept being used since the fiscal 1997–98 in India.[9]
