(iv) Then we have the **Earth Trilemma** (EEE), which posits that for: **(a)** economic development (E), **(b)** we need increased energy expenditure (E), **(c)** but this raises the environmental issue (E).

(v) Above all these more recent trilemmas in economics, the prima donna of all of them is Mundell's **'impossible trinity'**. This old trilemma asserts that a country cannot maintain, simultaneously, all three policy goals of – **(a)** free capital flows, **(b)** a fixed exchange rate, and **(c)** an independent monetary policy. The impossible trinity, has seen enough waters flowing down the time since it was articulated almost five decades ago which has a strong theoretical foundation in the *Mundell-Fleming Model* developed in the 1960s.

Dani Rodrik[63] argued that if a country wants more of globalisation, it must either give up some democracy or some national sovereignty. Niall Ferguson[64] highlighted the **trilemma** of a choice between commitment to globalisation, to social order and to a small state (meaning limited state intervention).

## TREASURY COMPUTERISATION OF STATE

### Governments

A scheme for implementation of the mission mode project[65] 'Computerisation of State Treasuries' was put in place by the GoI in June 2010 under the ***National e-Governance Plan (NeGP)***. The states and UTs are required to complete their projects in about three years beginning 2010-11. The funds are released against deliverables. The scheme will support states and UTs to fill the existing gaps in their treasury computerisation, upgradation, expansion and interface requirements, apart from supporting basic computerisation. The Scheme covers installation of suitable hardware and application software systems in a networked environment on a wide area basis and building of interfaces for data sharing among various stakeholders.

The scheme for treasury computerisation is expected to make the budgeting process more efficient, improve cash flow management, promote real-time
