India's approach to a lower-carbon growth strategy explicitly recognises that policies have to be inclusive and differentiated across sectors according to national priorities, so as to lower the transaction costs of implementing the policy, and conform with a nationally fair burden-sharing mechanism. An Expert Group on Low Carbon Strategies appointed by the ***Planning Commission*** has outlined the lower carbon strategies for major potential carbon mitigation sectors.

1. **Power:** On the supply side, adopt super-critical technologies in coal-based thermal power plants; use gas in combined heat and power systems; invest in renewable technologies; and develop hydropower in a sustainable manner. On the demand side, accelerate adoption of super-efficient electrical appliances through market and regulatory mechanisms; enhance efficiency of agricultural pump sets and industrial equipment with better technology; modernise transmission and distribution to bring technical and commercial losses down to world average levels; universalise access to electricity; and accelerate power-sector reforms.
2. **Transport:** Increase the share of rail in overall freight transport; improve the efficiency of rail freight transport; make it price competitive by bringing down the levels of cross-subsidisation between freight and passenger transport; complete dedicated rail corridor; improve share and efficiency of public transport system; and improve fuel efficiency of vehicles through both market-based and regulatory mechanisms.
3. **Industry:** Greenfield plants in the iron and steel and cement sectors adopt best available technology; existing plants, **particularly small** and medium ones, modernize and adopt green technology at an accelerated pace, with transparent financing mechanisms.
4. **Buildings:** Evolve and institutionalise green building codes at all levels of government.
5. **Forestry:** 'Green India Mission' to regenerate at least 4 million ha of degraded forest; increase density of forest cover on 2 million ha of moderately dense forest; and overall increase the density of forest
