The assessment and quantification of the costs of adaptation and mitigation is a difficult task. However, it is clear that these costs are significant and will likely be higher in the future as initiatives are taken in line with the goals outlined in the NAPCC. The preliminary estimates indicate a sum of ' 230,000 crore to fulfill the mission objectives under the NAPCC alone, let alone other lower carbon strategies and environment policies and programmes of the government.

The most obvious source of financing for climate change action is government budgetary support. Most of it would come as sectoral finance since some of the resources for adaptation and mitigation are built into the ongoing schemes and programmes. Although mitigation is sometimes an important co-benefit, the deployment of resources for such purposes is largely guided by the overall availability of resources. The Finance Bill 2010-11 created a corpus called the National Clean Energy Fund (NCEF) out of a cess at the rate of Rs.50 per tonne of coal to invest in entrepreneurial ventures and research in the field of clean energy technologies. The government expects to collect Rs. 10,000 crore under the NCEF by 2015. Governments have a range of policy instruments and
