Possible Socio-economic Impact: Its Influence Area of 436,486 sq. km is about 13.8 per cent of India's geographical area. It extends over seven states and two union territories, viz. Delhi, Uttar Pradesh, Haryana, Rajasthan, Madhya Pradesh, Gujarat, Maharashtra, Daman and Diu, and Dadra and Nagar Haveli. Around 17 per cent of the country's total population will be affected. The project goals are to double employment potential in 7 years, triple industrial output in sector on a sustained basis over next three years.

Urban Governance: Its innovative urban governance framework corporatises the urbanisation process. The central government will create a corpus fund, the 'DMIC Project Implementation Revolving Fund', as a trust administered by a board of trustees. The fund will contribute debt and equity to the SPVs (Special Purpose Vehicles) on a case-by-case basis. Land will be made available by the state government. The city SPVs will be vested with the responsibilities of planning and development and the power to levy user fees. The SPVs are to be companies under the Companies Act. The valuation increases from urbanisation and development will accrue to the city-level SPVs, and will be reinvested in the cities. The initial construction of the cities will be done through project managers with global experience, who will control, monitor, review, and supervise the detailed engineering.

Financing: Its trunk (basic) infrastructure is unlikely to be commercially viable that is why it would require government funding. Such internal infrastructure projects include land improvement, road works, earthworks, sewerage, storm water drainage, flood management, and solid waste management. Once such infrastructure is in place, the subsequent additions to the cities will be commercially viable and can be implemented through public private partnerships (PPPs). For major infrastructure activities such as power plants, integrated townships, and highways, PPP projects are planned. Various sources of funding have been planned as multilateral, bilateral, and domestic government.

Physical Infrastructure: The Multi-modal High Axle Load Dedicated Freight Corridor (DFC), 'a high-capacity railway system', is at the heart of the infrastructure. It will cover 1483 km and will have nine junction stations along which other railroad networks will connect allowing the system to extend its reach across a wide area. Other infrastructure plans include
