Unemployment was higher under both the UPSS and CWS but rural unemployment was higher under the CDS approach. This possibly indicates higher intermittent or seasonal unemployment in rural than urban areas, something that employment generation schemes like the MGNREGA need to pay attention to. However, overall unemployment rates were lower in 2009-10 under each approach vis-a-vis 2004-5. Labour force participation rates (LFPR) under all three approaches declined in 2009-10 as compared to 2004-5. However, the decline in female LFPRs was larger under each measure in comparison with male LFP which either declined marginally (UPSS), remained constant (CWS), or increased marginally (CDS).

Employment growth in the ***organized sector***, public and private combined, has increased by 1.9 per cent in 2010, which is lower than the annual growth for the previous year. The annual growth rate for the private sector was much higher than that for the public sector. However, in respect of both sectors, *annual increase in employment had slowed down* in 2010 vis-à-vis 2009. The share of women in organised-sector employment was 20.4 per cent in 2010 March end and has remained nearly constant in recent years. Only 15.6 per cent of the total workforce had regular wage employment/salaried work during 2009-10 while 33.5 per cent was casual labour and 51 per cent was self-employed (*'Employment Situation in 2010-11'* as *per Quarterly Survey Reports*). The ***Labour Bureau*** conducted twelve quarterly quick employment surveys to assess the impact of the economic slowdown on employment in India. These surveys indicate that the upward trend in employment since July 2009 has been maintained.

Comparative Human Development of States

One of the objectives of inclusive development is 'narrowing inter-state and inter-regional disparities'. As per the latest *Economic Survey 2012-13* the 'Inter-state comparisons of socio-economic development' of selected major states based on available indicators from different sources show some interesting results –

Population Related

Bihar has the *highest* decadal (2001-11) growth rate of population (25.07 per cent), while Kerala has the lowest rate (4.86 per cent). Some big states
