based on the former's prior research published in 1928 on the *Theory of Parlour Games* (in German).

The theory has found significant applications in many areas outside economics as usually construed, including formulations of nuclear strategies, ethics, political science, and evolutionary theory.

GDRS

While ADRs are denominated in dollars and traded on US National Stock Exchanges, GDRs can be denominated either in dollars or Euros and are commonly listed on European Stock Exchanges. Investors can cash in on the difference in price between local and foreign markets. Some time back ADRs and GDRs were *fungible* one way i.e. foreign investors could convert their ADRs/GDRs into underlying shares and sell them in the local market. However, they were not permitted to reconvert shares bought on the local exchange into ADRs/GDRs. In 2002, *two-way fungibility* was permitted. Under these rule reissuance of depositary receipts is permitted to the extent to which they have been redeemed into underlying shares and sold in the domestic market.

GIFFEN GOOD

The good for which the demand increases as its price increases, rather than falls (opposite to the *general theory of demand*)–named after Robert Giffen (1837–1910). It applies to the large proportion of the goods belonging to the household budget (as flour, rice, pulses, salt, onion, potato, etc. in India)–an increase in their prices produces a large *negative income effect* completely overcoming the normal substitution effect with, people buying more of the goods.
