An additional problem concerned the treatment of the dead. Identification and burial of the dead was not a high priority for the regime. Reports from witnesses on the ground stated that dead bodies continued to float in waterways several months after the cyclone hit. This contaminated the water supply and also caused significant mental health problems for villagers across the country. The regime went as far as to arrest volunteers attempting to bury victims.

Another problem encountered by the citizens of Myanmar was land confiscation. All land in the country is owned by the state, which allows the citizens to use the land as long as they continue to use it in productive ways. In order to expedite the return of villagers to their land after the cyclone, the regime began to confiscate lands not being utilized. In some cases, the land was given to large agribusiness firms, which paid the regime for the property. These large-scale agricultural entities forced the small farmers out of existence, threatening thousands of citizens. Many citizens that returned to their land were forced to rent tractors and equipment at exorbitant rates well beyond the means of the average peasant farmer.

The establishment of camps also made the population more vulnerable in numerous ways. Human trafficking and the recruitment of child soldiers were two of the more problematic areas of concern. Young girls orphaned were reported to be offering sex for money. The issue of sexually transmitted disease and the personal safety of the girls was a grave concern. In addition, it was feared that the military would use the situation to recruit more children into the army. According to international organizations, including the UN, Myanmar is actively engaged in child-soldier recruitment. It was also reported that the orphanages set up by the Myanmar authorities were like prisons. Efforts by community leaders to keep the children gathered together outside of the government-run institutions was met with hostility from the state. Many adoptions were facilitated to military families so that the orphans would eventually end up as part of the military establishment.

The psychological impact of cyclone Nargis cannot be overlooked. For survivors, the images of the horrific event will not be forgotten. Emma Larkin in her groundbreaking work *Everything Is Broken* recounts a survivor story, “In a village not far from the delta town of Mawlamyainggyun, I walked past a large drinking water pond that seemed
