Samsung Galaxy Z Flip 8

Still one of the best flip phones

Foldable phones have become more practical over the years, and Samsung has been one of the biggest names in this space. The company has spent years refining its flip phone design, turning a form factor that once felt experimental into something that can be used every day. With every generation, Samsung has made its flip phone better.

If you have been following Samsung's journey, the biggest step forward came with the Galaxy Z Flip 5 in 2023. The device felt more complete, practical and polished. It was more stylish, complete and finally a device that can be recommended to someone who wants to step away from a convention.

Build 8.2
Value for Money....6.8

And now, eight generations in, the Galaxy Z Flip 8 arrives with a familiar approach and you will call it even more refined. But over the years, the question has changed from 'whether a flip phone is practical' to 'is it a meaningful upgrade'? To find this out, I used the Galaxy Z Flip 8 as my daily driver for a few weeks. From its design and display to performance, cameras and battery life, here is what I think about it.

DESIGN

At a glance, the Galaxy Z Flip 8 looks almost identical to the Galaxy Z Flip 7. Samsung has not made any major changes to the overall design. However, there are some small refinements. The Galaxy Z Flip 8 is thinner when unfolded and a little lighter than its predecessor. At 180 grams, it is 8 grams lighter than the Galaxy Z Flip 7.

When folded, the Galaxy Z Flip 8 becomes very compact. This is still the biggest reason to buy a flip phone in the first place. The phone easily fits into smaller pockets and bags, and I found myself carrying it around much more comfortably than a regular or large-screen flagship.

The Galaxy Z Flip 8 also feels sturdy in the hand, and the hinge has a solid feel to it. However, there is still one thing I wish Samsung would improve with its flip phones. You cannot easily flip open the Galaxy Z Flip 8 with just one hand. The hinge is tight enough that you generally need both hands to unfold the phone.

Anyway, I like how Samsung keeps the flip phone's design clean instead of adding unnecessary elements. The two rear cameras sit on the upper half of the phone, next to the cover display, while the rest of the back panel remains minimal, specifically that Pink shade.

The Galaxy Z Flip 8 comes with an IP48 rating for dust and water resistance. The frame uses Armor Aluminum, while the cover display is protected by Corning Gorilla Glass Victus 2. Of course, I would still be careful around water and dust because this is a foldable phone with a hinge. But the added protection does provide some reassurance for everyday use.

DISPLAY

The Samsung Galaxy Z Flip 8 features a 6.9-inch FHD+ Dynamic AMOLED 2X main display with a 120Hz adaptive refresh rate and Vision Booster support. The cover display measures 4.1 inches. Samsung claims that the main screen can reach a peak brightness of 2,600 nits. In our brightness test using a lux meter, we recorded a peak brightness of 2,400 nits, which is slightly lower than the claimed figure. However, it is still bright enough to offer good visibility even under direct sunlight.

Samsung being Samsung, the AMOLED panel itself delivers a very good viewing experience. Colours look vibrant without being overly saturated, blacks are deep, and text and images look sharp. The 120Hz adaptive refresh rate also makes scrolling and animations feel smooth.

I also tested the display using Calman and the SpectraCal C6 Colorimeter. It recorded an average Delta E of 0.65, which is a very good result. In simple terms, this means the display can reproduce colours quite accurately. The panel also covered almost 100 percent of the sRGB colour gamut, which is also excellent. This gives the screen a wide colour range, and it is something you can notice while watching videos, browsing photos or using the phone.

PERFORMANCE

Samsung has used its in-house Exynos 2600 chipset for the Z Flip 8. The phone comes with 12GB of RAM and up to 512GB of storage. To test its raw performance, I ran the usual benchmarks. The Galaxy Z Flip 8 scored 26,59,552 on AnTuTu. In Geekbench 6, it achieved 2,580 points in the single-core test and 9,147 points in the multi-core test.
