APPLE's PRO EVENT

FOLDABLE DEBUT

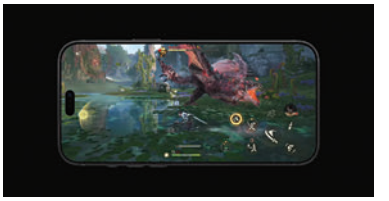

Say hello to iPhone Duo

Apple's long-rumoured foldable finally arrived as the iPhone Duo, a passport-style device built around a 7.6-inch inner Super Retina XDR display and a 5.4-inch outer screen, both with ProMotion, Always-On and 3,000 nits of peak brightness. It is the first iPhone to run the 2nm A20 Pro chip, which Apple claims delivers 35% better sustained performance than the iPhone 17 Pro, and the first in years to drop Face ID for Touch ID in the side button. A Grade 5 titanium frame, IP68 rating, dual 48-megapixel cameras and up to 44 hours of video playback round out the package. India pricing starts at Rs 2,99,900, with pre-orders from October 16 and sales from October 23. Will you buy one? **tinyurl.com/ywp74v72**

GAMING SILICON

iPhone 18 Pro Gaming: A20 Pro Chip, 7-Core GPU

The iPhone 18 Pro is the first phone anywhere to ship a 2nm processor, and the A20 Pro's gaming credentials are the clearest expression of what that buys. Its seven-core GPU runs 40% faster than the previous generation with 50% more memory bandwidth, helped by Wafer-Level Multi-Chip Module packaging that sits the RAM closer to the SoC to cut latency. A vapour chamber with three times the surface area keeps sustained frame rates from collapsing. **tinyurl.com/mrxsfmrj**

Apple Watch Series 12 and Watch Ultra 4 launched with Apple Intelligence features

Apple's 2026 watches lead on health rather than looks. A new Health Sensing System reads heart rate every five seconds and captures HRV 24 times more often than before, feeding a daily Readiness Score out of 10 that blends activity, training load, sleep and vitals into a single number with tailored advice. Both the Series 12 and the Ultra 4 run the S11 chip and pick up Siri AI through watchOS 27, along with Sound Recognition, Live Rewind and Siri Recap. The Ultra 4 starts at Rs 1,09,900 18. **tinyurl.com/bdfea9ru**

Apple AirPods 5 have better ANC, wireless charging variant

The AirPods 5 keep Apple's half in-ear design, which never seals the ear canal, yet claim 50% more noise reduction than the AirPods 4 and what Apple calls the best active noise cancellation in an open-air design. Adaptive Audio switches between cancellation and transparency on its own as your surroundings change, and the buds carry Personalised Spatial Audio, Live Translation, Conversation Awareness, Adaptive EQ, hands-free Siri and an IP57 rating. Standard pair's Rs 14,900 and a wireless charging variant's at Rs 17,900. **tinyurl.com/4p7w3yhj**
