SNAPDRAGON'S 2NM SUMMIT

ALL IN AI

'AI is the new UI': Qualcomm CEO Cristiano Amon says smartphones are in the agentic era

Speaking at the Snapdragon Summit 2026 that took place in Maui, Hawaii, Qualcomm CEO Cristiano Amon outlined a pivotal shift that is taking place across the mobile industry: smartphones are evolving from app-driven touchscreens into context-aware, agentic AI hubs. He said that AI has changed so quickly in the last few years and rather than replacing smartphones, AI agents will fundamentally change how we interact with them which will shift the focus from basic manual user input to seamless background execution.

"We are on the beginning of agentic age and Snapdragon is the platform built for it," he said, while adding that AI is the new UI. **tinyurl.com/48xhjuy4**

EXTREME IS IN

Qualcomm launches Snapdragon 8 Elite Gen 6 and Extreme chips to take on Apple's 2nm A20 Pro

Qualcomm has unveiled its next-generation smartphone silicon: the Snapdragon 8 Elite Gen 6 and its higher-tier counterpart, the Snapdragon 8 Elite Extreme Gen 6. This is the first time when Qualcomm has announced dual flagships for smartphones, entering a new era with AI agents at the centre of mobile experience.

Announced at the Snapdragon Summit and designed to take on Apple's latest mobile chips, this dual-flagship strategy gives Android manufacturers more flexibility.

Both processors transition to an advanced 2nm architecture, delivering notable efficiency and raw performance boosts. With these chips, Qualcomm is betting big on the agentic AI experience. **tinyurl.com/mwzk4jwn**

Motorola is back in the flagship race with Signature 27 and Qualcomm's new 2nm Snapdragon chip

Motorola has officially given a first look at the Motorola Signature 27 at Qualcomm's Snapdragon Summit. Positioned as a flagship, the device is one of the first announced smartphone powered by Qualcomm's newly unveiled Snapdragon 8 Elite Extreme Gen 6 processor. And, it looks like a serious competitor to ultra flagship phones from Samsung and Apple. This might also mark Motorola's big and long pending comeback in the flagship category, if the phone is priced well. OnePlus's recent struggles, combined by major cut down in Realme, iQOO and Nothing, leaves a big void in the flagship category which provides a fresh opportunity for Motorola. They seem to have done a really good job with Signature 27, at least on paper.

Powered by the 2nm Snapdragon 8 Elite Extreme Gen 6, the Signature 27 introduces an "ArcticMesh" cooling system. To tame thermal output during high-end AI, gaming, and 8K video processing, it uses diamond-infused thermal gel, liquid metal, copper mesh, and a 3D vapor chamber. **tinyurl.com/33eu6bwm**
