IFA 2026

HYBRID AI

Lenovo's hybrid AI bet: the Yoga, IdeaPad, ThinkCentre and Motorola line-up from IFA 2026

Lenovo used its Innovation World showcase to argue that AI should run partly on-device and partly in the cloud. The headline machines are the first laptops on NVIDIA's RTX Spark platform: the Yoga Pro 9n, with a 20-core Grace CPU, 6,144-core Blackwell GPU and upto 128GB unified RAM behind a 15.3-inch OLED, and the convertible Yoga 9n, pairing a 16-inch OLED and 360-degree hinge with a 99.9Wh battery and six-speaker Dolby Atmos. The IdeaPad Vibe, a mainstream laptop, starts at EUR 799 in October, while the IdeaCentre AIO i starts at EUR 999 in

November. The ThinkCentre X Ultra packs an AMD Ryzen AI Max+ PRO 495 and up to 128GB unified RAM, with 96GB for graphics. Two ThinkBooks, four ThinkVision monitors and concepts like the sub-830g Project AeroBlade and rollable Project Swan complete it. **tinyurl.com/y89sce9p**

LOCAL AI

NVIDIA wants every PC in your home pooling its AI: PAIR, RTX Spark and one-click agents

NVIDIA's pitch at IFA 2026 was that the AI hardware in a home should behave as one pool rather than several islands. The vehicle is PAIR, a Personal AI Router that spreads inference across every capable PC on a network. It finds machines over mDNS, pairs them using six-digit codes, secures the link with mutual TLS, and then routes whole requests rather than splitting models, sending each one to the least busy GPU. It watches queue depth and utilisation to decide, and deliberately skips a card that is mid-game. PAIR proxies to Ollama and LM Studio, runs on Windows, Linux and macOS, and has been released as an open-source beta under the Apache 2.0 licence. **tinyurl.com/3hnjwwa3**

Hands-on with the Lenovo IdeaPad Vibe: Seven brand new colours

The IdeaPad Vibe is Lenovo's attempt to make the ordinary laptop worth looking at. It ships in seven colours, named Dreamy Violet, Spicy Gold, Zen Green, Chill Blue, Radiant Coral, Moody Blue and Lowkey Grey, and in person the finishes hold up better than the names. The customisation runs deeper than paint, because the keycaps are replaceable, so a buyer can mix and match rather than live with whatever the factory chose. Underneath, the Vibe is conventional in the reassuring sense:

the chassis feels solid with no worrying gaps, the typing deck is firm, and the touchpad is ordinary but unobjectionable. Buyers choose between Snapdragon X, which brings Copilot+ features and up to 24GB of memory, and AMD's Ryzen AI 400 series, which allows up to 32GB across two slots plus a 1TB SSD, with Intel versions due later. Displays are either an IPS panel running at 120Hz, or an OLED with full DCI-P3 coverage that is restricted to the Lowkey Grey and Moody Blue finishes. It starts at EUR 799 in Europe, with Indian pricing still unannounced. **tinyurl.com/3fpmeszj**
