currently allows. The maximum deviation across the entire chart was 4.81, and those outliers are in the most saturated colour regions where the human eye is least sensitive to error.

The cover screen posts an average DeltaE of 1.05, still well within the threshold that matters in real-world use. The sRGB coverage is 98.5% on the main panel and 97.2% on the cover. Samsung's colour management properly restricts DCI-P3 coverage to the 73–79% range in Natural mode, which means SDR content is not receiving the unwanted saturation boost that plagues many OLED panels. Grayscale tracking on the main screen averages a DeltaE of 0.75 with a maximum of 1.00, keeping whites and greys neutral and free of tint. The EOTF tracking follows its target curve cleanly on both displays, preserving shadow detail without artificially crushing it.

Both displays support 120 Hz adaptive refresh under LTPO control, HDR10+ for premium streaming content and 10-bit colour depth. The full-flat inner and outer panels from the Fold 7 carry over, making edge gesture navigation and typing on the cover screen feel consistent.

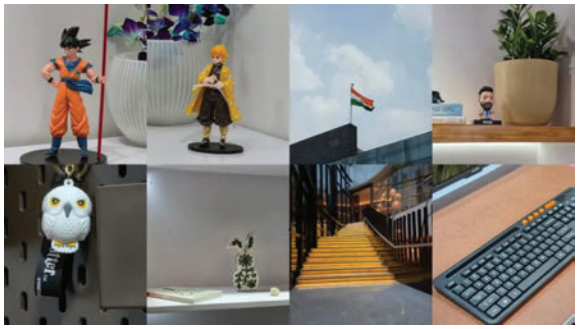

CAMERAS

The camera system on the Fold 8 Ultra is the most capable setup Samsung has shipped on a foldable and our testing across outdoor daylight, high-contrast indoor scenes and close-up subjects shows a system that has grown up considerably from its predecessors.

The 200 MP main sensor at f/1.7 and 24mm handles difficult exposures that reflects mature image signal processing. In backlit outdoors, highlight containment is measured in scenes with bright skies retain defined transitions without blown-out halos. Shadow detail in underlit street scenes holds without the over-brightening that makes artificially processed HDR look flat. Auto white balance under mixed lighting runs slightly warm but avoids the green or magenta tint shifting that still catches out some competing systems.

The zoom performance across the focal range is where the improvement from the Fold 7 is most consistent. The mid-telephoto range (2x–3x) delivers natural perspective compression with high fidelity on medium subjects. At the 3x optical mark, the 10 MP telephoto handles fine textures, clean edges and minimal chromatic fringing on high-contrast outlines. Push further into the digital zoom range, and fine text remains legible without aggressive edge ringing, even at higher crop factors.

When it comes to close-up photography, the depth falloff from the focal plane into soft blur is smooth and gradual rather than the abrupt software-cutout quality. The Fold 8 Ultra's colour science has grown more

controlled, foliage stays lively without turning neon, saturated primaries like crimson red retain tonal gradients without banding and complex indoor hues maintain accuracy across varying light falloff.

The 50 MP ultrawide at f/1.9 is a significant upgrade over the previous generation. A wider field at a faster aperture means more versatile low-light and landscape shooting, and the colour consistency between the ultrawide and the main sensor is well-managed.

The one limitation that persists is the 10 MP telephoto in low light. This was the Fold 7's weak point in the zoom and the Fold 8 Ultra carries the same. At 3x optical in poor light, detail drops, noise increases and dynamic range tightens. It remains serviceable, but it is the area where the gap to the best cameras in the market is most visible.

SOFTWARE

The Fold 8 Ultra ships with Android 17 and One UI 9, with Samsung committing to seven major OS updates and correspondingly long security patches. The software experience continues to be the area where the foldable form factor earns its price beyond the hardware.

Split-screen multitasking, app continuity between the outer and inner displays, Flex Mode for using the phone as a mini laptop, and Samsung DeX for a desktop interface over USB or wirelessly remain the productivity tools that slab phones can only approximate. One UI 9 makes these workflows feel more integrated and less deliberate than in earlier versions: the transitions between modes are smoother, app memory management has improved, and the taskbar in DeX mode handles multi-app sessions with less friction.

UWB support enables precise spatial awareness for Samsung's device ecosystem. Bluetooth 6.0 is the latest version of the standard, and Wi-Fi 7's tri-band support means the Fold 8 Ultra is not going to be the bottleneck in any near-future networking scenario.

– Siddharth Chauhan

SPECIFICATIONS

Processor: Qualcomm Snapdragon 8 Elite Gen 5 | RAM: 12/16 GB | Storage: 256/512/1024 GB | Display(Cover): 6.5-inch 1080x2520 Dynamic LTPO AMOLED | Display(Opened): 8-inch Dynamic LTPO AMOLED 2x | Brightness: 3000 nits | Refresh Rate: 120 Hz | Camera (rear): 200 + 50 + 10 MP | Camera (front): 10 MP | Camera (Internal): 10 MP | OS: Android 17 | Battery: 5000 mAh | Charging: 45W Wired, 20W Wireless
