30°, 60° set square

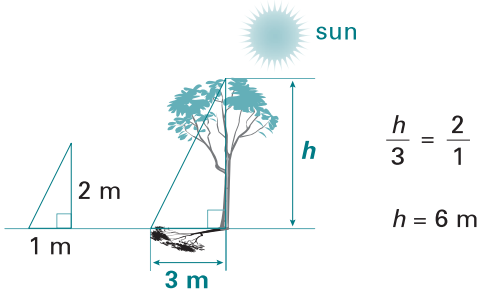

Set squares are used for drawing parallel lines, right and other angles, etc.

See parallel lines, right angle

shadow stick measuring

A useful, old method for calculating heights that cannot be directly measured. It is based on the properties of similar triangles.

Example

We measure the shadow of a stick of a known length and the shadow cast by the tall object. The length of the stick and the object, and their shadows, are in the same ratio.
