square

A quadrilateral with four equal sides and four right angles.

Example

See quadrilateral, right angle

square centimetre

(Symbol: cm^2)

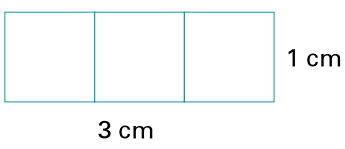

A square centimetre is a unit for measuring area.

Examples

The area is one square centimetre.

The area of this shape is three square centimetres.

3 cm × 1 cm = 3 cm^2

See area, unit of measurement

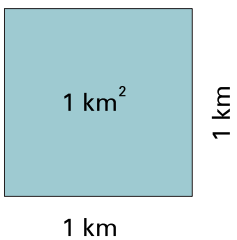

square kilometre

(Symbol: km^2)

A unit for measuring very large areas.

$$1\ km^2 = 1\,000\,000\ m^2$$

Examples

The area of the Northern Territory is 1 346 200 km^2.

Smaller areas, like the sizes of towns or suburbs, are measured in hectares.

$$1\ km^2 = 100\ ha$$

See area, hectare, unit of measurement

square metre

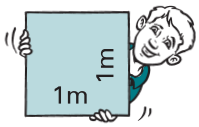

(Symbol: m^2)

A unit for measuring area.

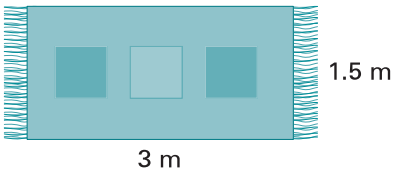

$$1\ m^2 = 10\,000\ cm^2$$

Examples

(i) This man is holding a piece of cardboard which has an area of one square metre.

(ii) This rug has an area of 4.5 m^2.

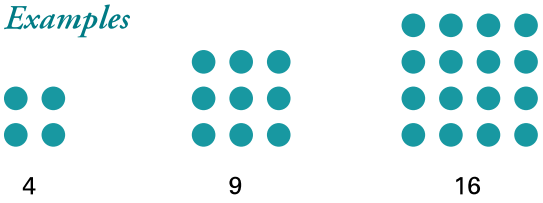

See area, square centimetre, unit of measurement

square number

A number that can be represented by dots in the shape of a square.

Examples

See index, index notation, triangle number
