third

(i) The ordinal number which comes after second and before fourth.

Example

1st 2nd 3rd 4th

(ii) One third means one of three equal parts. Written as $\frac{1}{3}$.

Example

$\frac{1}{3}$ has been coloured in

$\frac{1}{3}$	$\frac{1}{3}$	$\frac{1}{3}$

See ordinal number

thousand

Ten hundreds, written as 1000.

See hundred

thousand separator

For easy reading, large numbers are divided into groups of three digits either side of the decimal point.

Example

26 375 159.123 45

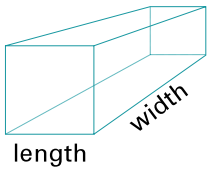

The correct separator is a narrow space between the groups of digits, as shown, not the comma that was used in the past.

three-dimensional

(3D)

When something has length, width and height, that is, three dimensions, then it is three-dimensional. Space figures (solids) are three-dimensional.

Example

The sketch produces an illusion of depth, length and height.

See dimension, solid, sphere

time interval

The time that passes between two events.

Some units of time are:

second s
minute min
hour h
day d
week, month, year, decade, century, millenium

See unit of measurement

time line

A line on which intervals of time are recorded in chronological order.

Example

See time interval
