

arbitrary unit

Something to help us measure.

Examples

Handspan, pace, counters, tiles, cubes, squares and bottle tops are arbitrary units.

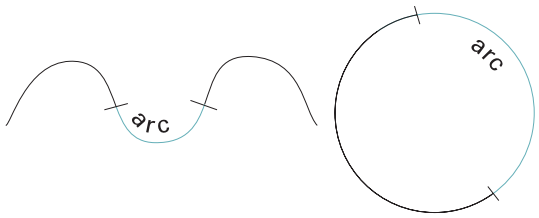

The area of this rectangle has been measured in bottle tops. The area is twenty-eight bottle tops.

See handspan

arc

A part of any curve, but most often used to mean a part of a circle.

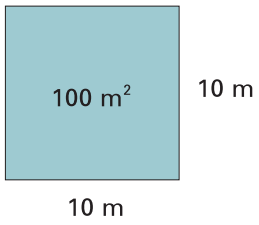

Example

See circle, curve

are

Unit of area in the metric system. It is the area of a square with sides measuring 10 metres.

100 m² = 1 are
100 are = 1 ha

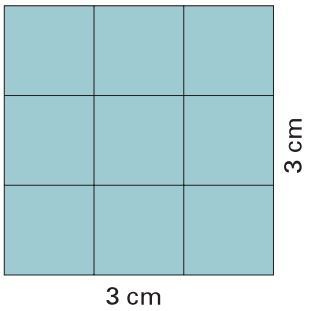

See area, hectare

area

The amount of surface or the size of a surface. Area is measured in square units. Units of area are:

square centimetre	cm^2
square metre	m^2
hectare	ha
square kilometre	km^2

Example

The area of this shape is
base × height
3 cm × 3 cm = 9 cm^2

See conservation of area, formula, surface, unit of measurement
